

Infection Current Awareness Update

24/06/2024

Welcome to the weekly **Infection Current Awareness Update** (ICAU), produced by **UKHSA Knowledge and Library Services**. The purpose of this update is to provide you with the latest, best evidence about infection, to help you make informed decisions.

If you have any queries, please contact us at libraries@ukhsa.gov.uk, and if you would like to request a literature search, please use the **Knowledge and Library Services Enquiries Portal**.

Please note that not all the articles and resources referred to in this alert are freely available. Some articles may require an Athens username and password. For further information on Athens accounts please visit [here](#). If you are not eligible to access our library services, then you may want to approach your **local NHS library service**.

We do not accept responsibility for the availability or reliability of the items of content included in this alert and their inclusion is not an endorsement of any views that may be expressed.

COVID-19 related research

COVID-19 infection

1. [\[Articles\] Interim safety and immunogenicity of COVID-19 omicron BA.1 variant-containing vaccine in children in the USA: an open-label non-randomised phase 3 trial](#)

19-03-2024 - Elsevier

mRNA-1273.214 was immunogenic against BA.1 and D614G in children aged 6 months to 5 years, with a comparable safety profile to mRNA-1273, when given as a two-dose primary series or a booster dose. These results are aligned with the US Centers for Disease Control and Prevention recommendations for the use of variant-containing vaccines for continued protection against the emerging variants of ... Infection-related journals

American Journal of Infection Control

1. Group A Streptococcal Outbreak in a Geriatric Mental Health Unit

24-06-2024 - *Elsevier*

We report a Group A streptococcal (GAS) outbreak in a geriatric mental health in-patient unit. Communication with cognitively impaired patients, limitations in adherence to hygiene practices and communal dining may have facilitated transmission. Settle plates aided in identifying a colonized patient. Rapid access to whole genome sequencing facilitated assessment and management. [Read more...](#)

2. Associations between Negative Patient Safety Climate and Infection Prevention Practices

19-06-2024 - *Elsevier*

The relationships among positive perceptions of safety climate and healthcare worker behaviors have been increasingly documented in the literature. The potential influence of negative perceptions is underexplored and has not been examined specifically in relation to standard precaution adherence. We addressed this gap using data collected as part of a multi-site, ... [Read more...](#)

BMJ Quality & Safety

1. Grand rounds in methodology: designing for integration in mixed methods research

19-06-2024 - *British Medical Journal*

Mixed methods research is a popular approach used to understand persistent and complex problems related to quality and safety, such as reasons why interventions are not implemented as intended or explaining differential outcomes. However, the quality and rigour of mixed methods research proposals and publications often miss opportunities for integration, which is the core of mixed methods. [Read more...](#)

2. Association between language discordance and unplanned hospital readmissions or emergency department revisits: a systematic review and meta-analysis

19-06-2024 - *British Medical Journal*

Background and objective Studies conflict about whether language discordance increases rates of hospital readmissions or emergency department (ED) revisits for adult and paediatric patients. The literature was systematically reviewed to investigate the association between language discordance and hospital readmission and ED revisit rates. Data sources Searches were performed in PubMed, ... [Read more...](#)

3. Can virtual reality simulations improve macrocognition?

19-06-2024 - *British Medical Journal*

Simulation studies provide a unique opportunity to develop a deeper understanding of how healthcare workers manage risk in everyday care. In this issue of the journal, Mumma and colleagues¹ use a simulation design to analyse how nurses think during infection prevention and control practices and identify the cognitive skills that are associated with high performance. [Read more...](#)

4. Between-hospital variation in indicators of quality of care: a systematic review

19-06-2024 - *British Medical Journal*

Background Efforts to mitigate unwarranted variation in the quality of care require insight into the 'level' (eg, patient, physician, ward, hospital) at which observed variation exists. This systematic literature review aims to synthesise the results of studies that quantify the extent to which hospitals contribute to variation in quality indicator scores. Methods Embase, Medline, ... [Read more...](#)

5. "Its probably an STI because youre gay": a qualitative study of diagnostic error experiences in sexual and gender minority individuals

19-06-2024 - *British Medical Journal*

Background There is a critical need to identify specific causes of and tailored solutions to diagnostic error in sexual and gender minority (SGM) populations. Purpose To identify challenges to diagnosis in SGM adults, understand the impacts of patient-reported diagnostic errors on patients' lives and elicit solutions. Methods Qualitative study using in-depth semistructured interviews. [Read more...](#)

6. Connecting pathogen transmission and healthcare worker cognition: a cognitive task analysis of infection prevention and control practices during simulated patient care

19-06-2024 - *British Medical Journal*

Background Relatively little is known about the cognitive processes of healthcare workers that mediate between performance-shaping factors (eg, workload, time pressure) and adherence to infection prevention and control (IPC) practices. We taxonomised the cognitive work involved in IPC practices and assessed its role in how pathogens spread. Methods Forty-two registered nurses performed ... [Read more...](#)

7. Understanding linguistic inequities in healthcare: moving from the technical to the social

19-06-2024 - *British Medical Journal*

When patients and clinicians do not speak the same language, the quality and safety concerns that can arise seem evident. However, the literature on the association between language and a host of health outcomes is vast and varied. In this issue of BMJQS, Chu et al share the results of their well-conducted systematic review and meta-analysis of the relationship between a patient's spoken ... [Read more...](#)

8. Variation in quality of care between hospitals: how to identify learning opportunities

19-06-2024 - *British Medical Journal*

In healthcare, as in life, the adage 'variety is the spice of life' often holds true. Variation can represent individual patient preferences, but when it comes to the quality of healthcare, variation can also be unwanted and harmful. Analysis of variation in a quality-of-care indicator assumes that finding only limited variation is a good thing, suggesting consistently high compliance with ... [Read more...](#)

Clinical Infectious Diseases

1. Piperacillin/tazobactam Susceptibility Test Interpretive Criteria for Enterobacterales: Recommendations from the United States Committee on Antimicrobial Susceptibility Testing

21-06-2024 - Oxford University Press

Contrary to CLSI, FDA, and EUCAST, USCAST does not recommend piperacillin/tazobactam (TZP) susceptibility breakpoints for Enterobacterales non-susceptible to third-generation cephalosporins (3GC) or with a high likelihood of significant AmpC production. UCAST only recommends a TZP susceptibility breakpoint for 3GC-susceptible Enterobacterales. [Read more...](#)

1. Highly pathogenic avian influenza A(H5N1) virus infections on fur farms connected to mass mortalities of black-headed gulls, Finland, July to October 2023

20-06-2024 - *Eurosurveillance*

Highly pathogenic avian influenza (HPAI) has caused widespread mortality in both wild and domestic birds in Europe 2020-2023. In July 2023, HPAI A(H5N1) was detected on 27 fur farms in Finland. In total, infections in silver and blue foxes, American minks and raccoon dogs were confirmed by RT-PCR. The pathological findings in the animals include widespread inflammatory lesions in the ... Background To be better prepared for emerging wildlife-borne zoonoses, we need to strengthen wildlife disease surveillance. Aim The aim of this study was to create a topical overview of zoonotic pathogens in wildlife species to identify knowledge gaps and opportunities for improvement of wildlife disease surveillance. Methods We created a database, which is based on a systematic literature ... [Read more...](#)

6. An unusual outbreak of parvovirus B19 infections, France, 2023 to 2024

20-06-2024 - *Eurosurveillance*

From April 2023 to May 2024, an unusual epidemic of parvovirus B19 (B19V) infections occurred in France. The number of B19V IgM-positive serologies was four times higher than in the previous epidemic in 2019. Clinical data from emergency networks corroborated this observation. Morbidity and mortality consequences were observed in children through all data sources. [Read more...](#)

18. [Media Watch] A tribute to the elimination of leprosy

20-05-2024 - Elsevier

Elimination of leprosy as a public health problem (prevalence of fewer than one leprosy case per 10 000 people) was attained in the majority of countries by 2010. Still, this neglected tropical disease is found in over 120 countries, with more than 200 000 new cases recorded annually, according to WHO. [Read more...](#)

19. [Corrections] Correction to Lancet Infect Dis 2024 published online April 3.

[https://doi.org/10.1016/S1473-3099\(24\)00142-7](https://doi.org/10.1016/S1473-3099(24)00142-7)

06-05-2024 - Elsevier

Ferrés M, Martínez-Valdebenito C, Henriquez C, et al. Viral shedding and viraemia of Andes virus during acute hantavirus infection: a prospective study. *Lancet Infect Dis* 2024 published online April 3. [https://doi.org/10.1016/S1473-3099\(24\)00142-7](https://doi.org/10.1016/S1473-3099(24)00142-7)—In the Summary of this Article, the Funding line should have read “National Institutes of Health and Agencia de Investigación y Desarrollo”. 20. [Comment] Listeria monocytogenes: a rare, deadly cause of peritonitis

09-04-2024 - Elsevier

Invasive listeriosis is one of the most serious foodborne diseases, and can be categorised into three main clinical forms: septicaemic listeriosis, neurolisteriosis, and pregnancy-associated listeriosis.¹ *Listeria monocytogenes*-associated spontaneous bacterial peritonitis is a very rare manifestation of listeriosis, which mostly occurs as a complication of long-standing ascites in patients ... [Read more...](#)

21. [Articles] Listeria monocytogenes-associated spontaneous bacterial peritonitis in France: a nationwide observational study of 208 cases

09-04-2024 - Elsevier

Despite the non-specific and mild presentation of *L. monocytogenes*-associated spontaneous bacterial peritonitis, the outcome is poor and similar to that of neurolisteriosis, and so identification of *L. monocytogenes* in ascitic fluid samples requires urgent parenteral amoxicillin-based treatment to avoid a fatal outcome. [Read more...](#)

22. [Comment] Presence of Andes orthohantavirus in human body fluids

04-04-2024 - Elsevier

Orthohantaviruses belong to emerging zoonotic pathogens of global public health importance that can cause occasional outbreaks, often associated with conflict.^{1–3} These viruses are also categorised as category C pathogens by the US Centers for Disease Control and Prevention, and

could be used as biological weapons, with substantial biosafety and biosecurity implications. [Read more...](#)

23. [Articles] Viral shedding and viraemia of Andes virus during acute hantavirus infection: a prospective study

04-04-2024 - Elsevier

ANDV infection is a systemic and viraemic infection, that affects various organs. The presence of infectious particles in body fluids contributes to our understanding of potential mechanisms for person-to-person transmission, supporting the development of preventive strategies. Detection of ANDV RNA in additional fluids at hospital admission is a predictor of disease severity. [Read more...](#)

24. [Articles] Ad26.ZEBOV, MVA-BN-Filo Ebola virus disease vaccine regimen plus Ad26.ZEBOV booster at 1 year versus 2 years in health-care and front-line workers in the Democratic Republic of the Congo: secondary and exploratory outcomes of an open-label, randomised, phase 2 trial

27-03-2024 - Elsevier

Overall, the vaccine regimen and booster dose were well tolerated. A similar and robust humoral immune response was observed for participants boosted 1 year and 2 years after the first dose, supporting the use of the regimen and flexibility of booster dose administration for prophylactic vaccination in at-risk populations. [Read more...](#)

25. [Comment] Post-tuberculosis lung disease: is there a light at the end of tunnel?

23-03-2024 - Elsevier

On March 24, every year, the world is reminded of the public health tragedy of tuberculosis and urged to take action to enhance efforts to end this disease globally. Although progress has been made, by 2022, over 10 million people had developed the disease and 1.3 million people had died from it.1 Until 2020, when it was overtaken by COVID-19, tuberculosis was the most common cause of death ... [Read more...](#)

26. [Articles] Effect of single-dose, live, attenuated dengue vaccine in children with or without previous dengue on risk of subsequent, virologically confirmed dengue in Cebu, the Philippines: a longitudinal, prospective, population-based cohort study

23-03-2024 - Elsevier

The risk of developing virologically confirmed dengue after a single dose of CYD-TDV varied by baseline DENV serostatus. Since the study assessed the effect of only a single dose, the findings cannot inform decisions on vaccination by public health officers. However, the findings have implications for children who receive an incomplete vaccination regimen and these results should prompt more ... [Read more...](#)

27. [Comment] Mycobacterium tuberculosis transmission: the importance of precision

23-03-2024 - Elsevier

The identification of Mycobacterium tuberculosis as a causal agent of tuberculosis revolutionised the understanding of human diseases by showing that some have an infectious origin. How M tuberculosis spreads remained speculative until pioneering work—including having pulmonary tuberculosis patients cough directly onto guinea pigs—showed transfer of the bacillus to cause disease in a new host. [Read more...](#)

28. [Comment] Single dose of Dengvaxia vaccine: is it a cause for alarm?

23-03-2024 - Elsevier

Dengue, a global health problem, is caused by dengue virus (DENV), of which there are four serotypes (DENV1–4).1 A person infected via a mosquito bite will have no symptoms or show clinical manifestations ranging from dengue fever, a mild flu-like syndrome, to dengue shock

syndrome, a life-threatening condition.² Primary infection with a DENV serotype is usually asymptomatic or manifested as ... [Read more...](#)

29. [Comment] Towards improving the quality and usefulness of GBD tuberculosis estimates

19-03-2024 - Elsevier

We, as co-chairs of the Panel of Experts of the Global Burden of Disease Independent Advisory Committee (GBD IAC)'s Deep Dive into the Institute for Health Metrics and Evaluation (IHME)'s tuberculosis estimates, welcome publication of GBD 2021 Tuberculosis Collaborators' study in The Lancet Infectious Diseases.¹ In the study, the authors estimated age-specific trends in tuberculosis incidence ... 30. [Articles] Global, regional, and national age-specific progress towards the 2020 milestones of the WHO End TB Strategy: a systematic analysis for the Global Burden of Disease Study 2021

19-03-2024 - Elsevier

Despite accelerated progress in reducing the global burden of tuberculosis in the past decade, the world did not attain the first interim milestones of the WHO End TB Strategy in 2020. The pace of decline has been unequal with respect to age, with older adults (ie, those aged >50 years) having the slowest progress. As countries refine their national tuberculosis programmes and recalibrate for ... [Read more...](#)

31. [Comment] The era of SARS-CoV-2 variants calls for an urgent strategy for COVID-19 vaccination in children

19-03-2024 - Elsevier

With the prolonged circulation of SARS-CoV-2 and the widespread administration of COVID-19 vaccines, the immunity against SARS-CoV-2 in adults is predominantly due to previous variant exposures, vaccination, or both.^{1,2} However, as immunity due to vaccination and previous infection with SARS-CoV-2 wanes, there is a risk of reinfection. Current studies have focused on variant-specific booster ... [Read more...](#)

32. [Articles] Safety and immunogenicity of the co-administered Na-APR-1 and Na-GST-1 hookworm vaccines in school-aged children in Gabon: a randomised, controlled, observer-blind, phase 1, dose-escalation trial

19-03-2024 - Elsevier

Co-administration of recombinant Na-APR-1(M74) and Na-GST-1 to school-aged Gabonese children was well tolerated and induced significant IgG responses. These results justify further evaluation of this antigen combination in proof-of-concept controlled-infection and efficacy studies in hookworm-endemic areas. [Read more...](#)

33. [Comment] A step forward in the journey towards hookworm vaccines

19-03-2024 - Elsevier

Soil-transmitted helminth infections, comprising *Ascaris lumbricoides*, *Trichuris trichiura*, and the two hookworm species *Ancylostoma duodenale* and *Necator americanus*, are responsible for an immense burden on public health.¹ For decades, large-scale distribution of anthelmintic drugs has been the mainstay infection control measure, yet there are a scant number of drugs with only moderate ... [Read more...](#)

34. [Comment] The hidden threat of subclinical tuberculosis

13-03-2024 - Elsevier

Despite the UN's resolution of ending tuberculosis infection by 2035, it remains a major public health challenge. Tuberculosis used to be the leading cause of death in infectious diseases and became the second after COVID-19 during the pandemic. In 2022, there were 7.5 million new tuberculosis cases reported globally and 1.3 million deaths caused by tuberculosis. [Read more...](#)

35. [Articles] Prevalence of subclinical pulmonary tuberculosis in adults in community settings: an individual participant data meta-analysis

13-03-2024 - Elsevier

The majority of people in the community who have pulmonary tuberculosis do not report cough, a quarter report no tuberculosis-suggestive symptoms at all, and a quarter of those not reporting any cough have positive sputum smears, suggesting infectiousness. In high-incidence settings, subclinical tuberculosis could contribute considerably to the tuberculosis burden and to Mycobacterium ... [Read more...](#)
