

Mental Health Current Awareness Update

July 2024

Welcome to the monthly **Mental Health Current Awareness Alert** (MHCAU), produced by **UKHSA Knowledge and Library Services**. The purpose of this update is to provide you with the latest, best evidence about mental health, to help you make informed decisions.

If you have any queries, please contact us at libraries@ukhsa.gov.uk, and if you would like to request a literature search, please use the **Knowledge and Library Services Enquiries Portal**.

Please note that not all the articles and resources referred to in this alert are freely available. Some articles may require an Athens username and password. For further information on Athens accounts please visit [here](#). If you are not eligible to access our library services, then you may want to approach your **local health library service**.

We do not accept responsibility for the availability or reliability of the items of content included in this alert and their inclusion is not an endorsement of any views that may be expressed.

[1. Willingness to use mental health counseling in diverse groups of Asian Americans](#)

26-07-2024 - National Library of Medicine

Responding to the underutilization of mental health services in Asian American communities, we examined factors associated with their willingness to use mental health counseling. Applying Andersen's Behavioral Health Service Model, we focused on the role of mental health needs and prior use of mental health counseling in shaping the attitudes toward mental health counseling of diverse groups ... [2. Mind the Gap: Understanding Palliative Care Clinician Attitudes Toward Mental Health Training](#)

24-07-2024 - National Library of Medicine

Background: Palliative care (PC) clinicians provide mental healthcare to individuals with serious illnesses. Despite this, there is limited knowledge regarding their mental health training opportunities. Methods: To identify predictors of satisfaction with mental health training opportunities and assess the relationship between training opportunities and clinician comfort in managing mental ... [Read more...](#)

3. Community-Based Mental Health Services in Azerbaijan: a Course Toward Development:

24-07-2024 - National Library of Medicine

Community mental health care in Azerbaijan was established in 2011 in the line with the country's mental health reform. The main directions of the reform, as described in the National Mental Health Strategy, were deinstitutionalization, improving quality of care, integration of mental health into primary healthcare, and implementation of modern community-based services. [Read more...](#)

4. Social Vulnerability and Prevalence and Treatment for Mental Health and Substance Use Disorders

24-07-2024 - National Library of Medicine

CONCLUSIONS AND RELEVANCE: In contrast to previous studies using nonclinical symptom-based survey data, we found no association between SV and GAD or MDD. By contrast, there were associations of SV with prevalence of SSD, stimulant use disorder, and OUD with corresponding decreases in treatment. These results suggest that the SVM might assist in developing more comprehensive care models that ... [Read more...](#)

5. The WPA-IPS-SPF-AFPA Joint Panel Discussion Organized by the IPA: Voices from South Asia Regarding Older People's Mental Health Advocacy and Services: WPA-IPS-SPF-AFPA :

24-07-2024 - National Library of Medicine

Kicking off on 1 October with the United Nations' International Day of Older Persons (UNIDOP) and concluding on 10 October in conjunction with World Mental Health Day, the OLDER ADULT MENTAL HEALTH AWARENESS WEEK was a brand-new ten-day initiative launched by the International Psychogeriatric Association (IPA). It was focused on raising awareness of the importance of Better Mental Health for ... [Read more...](#)

6. Professional Values and Educational Needs among Mental Health Specialists in Russia: Survey Results

24-07-2024 - National Library of Medicine

CONCLUSION: The present study suggests that job opportunities, intellectual stimulation, and work-life balance are the most important professional values for future and practicing mental health specialists. These findings might be used as a basis for developing educational activities for mental health specialists. [Read more...](#)

7. Rethinking mental health interventions: leveraging resilience and targeted solutions to combat food insecurity in adults with obesity

24-07-2024 - National Library of Medicine

No abstract [Read more...](#)

8. DC:0-5 Diagnostic Classification of Mental Health and Developmental Disorders of Infancy and Early Childhood: Promotion in Russia

24-07-2024 - National Library of Medicine

The purpose of the report is to inform the community of Russian pediatric mental health professionals about the international DC:0-5™ Diagnostic Classification of Mental Health and Developmental Disorders of Infancy and Early Childhood: its purpose, target age, structure and

content of diagnostic axes, as well as about the steps already taken domestically to promote the Classification in Russia. [Read more...](#)

9. Mental Health of Older Adults: an Agenda for Action: :

24-07-2024 - National Library of Medicine

No abstract [Read more...](#)

10. Estimating survival in data-driven phenotypes of mental health symptoms and peripheral biomarkers: A prospective study

24-07-2024 - National Library of Medicine

CONCLUSIONS: This study emphasizes the role of patient self-report in stratified psychiatry. [Read more...](#)

11. Community Mental Health Services in Greece: Development, Challenges and Future Directions

24-07-2024 - National Library of Medicine

The current system of mental health care in Greece was created in accordance with the European Union and other international principles for mental health care provisions. Whereas Greece has been reforming its system of mental health care since at least the 1980s, the main recent Greek effort has been "Psychargos", a program which began in 2000 and is still in effect. [Read more...](#)

12. Deciphering Prefrontal Circuits Underlying Stress and Depression: Exploring the Potential of Volume Electron Microscopy

24-07-2024 - National Library of Medicine

Adapting to environmental changes and formulating behavioral strategies are central to the nervous system, with the prefrontal cortex being crucial. Chronic stress impacts this region, leading to disorders including major depression. This review discusses the roles for prefrontal cortex and the effects of stress, highlighting similarities and differences between human/primates and rodent brains. [Read more...](#)

13. 'Profound personal and professional impacts': A qualitative study of clinician experiences of a mental health disaster response to Australia's black summer bushfires

24-07-2024 - National Library of Medicine

CONCLUSION: Participant experiences had shared and distinct components before, during and after the mental health disaster response, culminating in profound personal and professional impacts. Findings highlight positive aspects and challenges for clinicians participating in a rural/metropolitan collaborative mental health disaster response. The findings of this study contribute new knowledge ... [Read more...](#)

14. Religious Coping, Resilience, and Military Spouse Mental Health

24-07-2024 - National Library of Medicine

CONCLUSIONS: This study draws attention to the role of religious coping and resilience in mental health outcomes for military spouses. Considering the role of military spouses in supporting service members, future research should explore how to strengthen military spouses' religious coping and resilience to mitigate mental distress, thereby facilitating service member success and military ... [Read more...](#)

15. Mental Health Promotion and Risk Reduction Strategies for Mental Disorders in Older Persons: Why Should Governments and Policymakers Care?: : ?

24-07-2024 - National Library of Medicine

There is no health without mental health. These are both indispensable human rights and are prerequisite to living one's life with dignity. Unfortunately, mental health systems have been in crisis, with burden of mental illness being among the ten leading healthcare-related issues worldwide, with no measurable reduction in such for over 30 years. Concurrently, ... [Read more...](#)

16. Community Mental Health Services in Egypt

24-07-2024 - National Library of Medicine

As far back as the 14th Century, Egypt had already developed mental health care in a community-based sense in Kalaoon Hospital in Cairo, 600 years before similar institutions were founded across the globe. By 2001, an Egyptian-Finnish bilateral comprehensive reform program was incorporated. A few years later, in 2007, the Minister of Health and Population initiated a proper appraisal of the ... 17. Community-Based Mental Health Services in India: Current Status and Roadmap for the Future

24-07-2024 - National Library of Medicine

An estimated 197.3 million people have mental disorders in India, and majority of the population have either no or limited access to mental health services. Thus, the country has a huge burden of mental disorders, and there is a significant treatment gap. Public mental health measures have become a developmental priority so that sustainable gains may be made in this regard. [Read more...](#)

18. Building food security: strategies to improve mental health among youth

24-07-2024 - National Library of Medicine

No abstract [Read more...](#)

19. Voice Assistants for Mental Health Services: Designing Dialogues with Homebound Older Adults

24-07-2024 - National Library of Medicine

The number of older adults who are homebound with depressive symptoms is increasing. Due to their homebound status, they have limited access to trained mental healthcare support, which leaves this support often to untrained family caregivers. To increase access, a growing interest is placed on using technology-mediated solutions, such as voice-assisted intelligent personal assistants (VIPAs), ... [Read more...](#)

20. Increased reproductive tract infections among secondary school girls during the COVID-19 pandemic: associations with pandemic-related stress, mental health, and domestic safety

24-07-2024 - National Library of Medicine

CONCLUSIONS: In this cohort of adolescent girls, BV and STIs increased following COVID-19-related school closures, and risk was mediated by depressive symptoms and feeling less safe in the home, which led to a higher likelihood of sexual exposures. [Read more...](#)

21. The Effect of Mindfulness-Based Interventions on Mental Health and Cognitive Function in Older Adults: A Systematic Review and Meta-Analysis

24-07-2024 - National Library of Medicine

OBJECTIVES: To assess whether mindfulness-based interventions (MBIs) affect mental health and cognitive abilities in older adults. [Read more...](#)

22. The Experience of the Crisis Clinic at the Scientific and Practical Center for Mental Health of Children and Adolescents named after G.E. Sukhareva

24-07-2024 - National Library of Medicine

CONCLUSION: The need to remedy severe crisis conditions and their associated psychopathological repercussions (including suicidal and self-harming behavior) calls for coordinated efforts on the part of specialists from different fields of knowledge related to childhood and adolescence. Our analysis of the experience of working with children and adolescents in the Crisis Clinic at the ... [Read more...](#)

23. The Quality of Care Provided by Outpatient Mental Health Services in Georgia

24-07-2024 - National Library of Medicine

Georgia has recently made a commendable effort to reform mental health care. The "Concept on Mental Health Care" adopted by the Government and the two strategic plans for 2014-2020 and 2021-2031, which aimed to develop comprehensive evidence-based, culturally appropriate, and human rights-oriented mental health care, have promoted the deinstitutionalization and development of community mental ... 26. Towards a WPA Position Document on the Human Rights of Older Adults with Mental Health Conditions:

24-07-2024 - National Library of Medicine

The increasing number of older adults in countries across the world is a huge challenge to those that are in charge of promoting, protecting, and implementing their human rights. This task is particularly difficult in the absence of a strong international framework addressing the principles required to guide the actions to combat all human rights violations. The existence of such a specific ... [Read more...](#)

27. Characteristics of children with a psychiatric disorder in 1999, 2004 and 2017: an analysis of the national child mental health surveys of England

24-07-2024 - National Library of Medicine

CONCLUSIONS: Our study reveals a concerning trend children with a disorder in 2017 experienced more severe difficulties and greater impact on functioning at school, home and in their daily lives, compared to children with a disorder in earlier decades. Research is needed to identify and understand factors that may explain the changing nature and level of need among children with a disorder. [Read more...](#)

28. Operational mental health. . .what practitioners and commanders should know

24-07-2024 - National Library of Medicine

CONCLUSION: More training is required to prepare both practitioners and commanders for the mental health issues that confront them on operational deployments. [Read more...](#)

29. Community-Based Mental Health Services in Mexico

24-07-2024 - National Library of Medicine

CONCLUSIONS: Evidence is available regarding the implementation of the transition from reliance on tertiary healthcare to reinforced primary care. At the same time, parity, financial protection, quality and continuity of care remain major challenges. [Read more...](#)

30. Recent Developments in Community-Based Mental Health Care in Japan: A Narrative Review

24-07-2024 - National Library of Medicine

CONCLUSION: This paper provided the first comprehensive review of Japan's community-based mental health care. Between 2010 and 2020, community mental health care in Japan evolved in many directions, with the understanding that various needs should be met. Home-visit nursing care and ACT can be considered as the most thoroughly investigated and better developed. [Read more...](#)

31. Psychiatric Healthcare Experiences of South Asian Patients with Severe Mental Illness Diagnoses and Their Families in New York City: A Qualitative Study

24-07-2024 - National Library of Medicine

South Asians (SAs) underutilize mental health services compared to many racial and ethnic groups in the United States (US), yet there is limited research on the experiences of SAs living with severe mental illness (SMI). This study examined psychiatric healthcare experiences of SA patients with SMI diagnoses (e.g., severe depression, bipolar disorder, schizophrenia) in New York City. [Read more...](#)

32. Community Mental Health Care in Aotearoa New Zealand: Past, Present, and the Road Ahead

24-07-2024 - National Library of Medicine

The healthcare system in Aotearoa New Zealand is currently undergoing a far-reaching overhaul. When it comes to mental health reforms, it is helpful to look at the road ahead, while paying attention to the road behind. Policies and services concerning the mental health and addiction sectors have undergone various reforms first, during the transition from a hospital-centered to the current ... [Read more...](#)

33. Development of Community Mental Health Infrastructure in Thailand: From the Past to the COVID-19 Pandemic

24-07-2024 - National Library of Medicine

Thailand is an upper middle-income country located in the center of mainland Southeast Asia with a population of 66.17 million as of 2021. The aim of this review article is to illustrate the development of community mental health in our country. We have divided the article into five main sections: namely, the mental health service infrastructure, the community mental health system, ... [Read more...](#)

34. Using natural language processing to facilitate the harmonisation of mental health questionnaires: a validation study using real-world data

24-07-2024 - BioMed Central

Pooling data from different sources will advance mental health research by providing larger sample sizes and allowing cross-study comparisons however, the heterogeneity in how variables are measured across st... [Read more...](#)

35. Effects of brief remote high ventilation breathwork with retention on mental health and wellbeing: a randomised placebo-controlled trial

23-07-2024 - National Library of Medicine

High ventilation breathwork with retention (HVBR) has been growing in popularity over the past decade and might be beneficial for mental and physical health. However, little research has explored the potential therapeutic effects of brief, remotely delivered HVBR and the tolerability profile of this technique. Accordingly, we investigated the effects of a fully-automated HVBR protocol, ... [Read more...](#)

36. Diagnostic Accuracy of Mental Health Screening Tools After Mild Traumatic Brain Injury

23-07-2024 - National Library of Medicine

CONCLUSIONS AND RELEVANCE: The findings of this diagnostic study suggest that the PHQ-9, GAD-7 and PC-PTSD-5 accurately screen for mental health disorders in patients with mTBI. Future research should corroborate optimal test cutoffs for this population. [Read more...](#)

37. Prolonged Fatigue and Mental Health Challenges in Critical COVID-19 Survivors

23-07-2024 - National Library of Medicine

Background: The aim of this study was to investigate the development of fatigue and mental illness between 3 and 12 months after critical COVID-19 and explore risk factors for long-lasting symptoms. **Study Design and Methods:** A prospective, multicenter COVID-19 study in southern Sweden, including adult patients (≥ 18 years) with rtPCR-confirmed COVID-19 requiring intensive care. [Read more...](#)

38. Association of resilience and psychological flexibility with surgeons' mental wellbeing

23-07-2024 - National Library of Medicine

CONCLUSION: Findings suggest that it is not only a surgeon's personality that is associated with their mental health, but the extent to which a surgeon demonstrates specific psychological qualities and skills (psychological flexibility and resilience). This has important implications for improving surgeons' mental wellbeing, because psychological flexibility and resilience are malleable, ... [Read more...](#)

41. Integrating psychological assessment in achalasia management: addressing mental health to enhance patient outcomes

23-07-2024 - National Library of Medicine

Achalasia is a chronic esophageal disorder with a generally favorable prognosis however, approximately 20% of patients experience persistent or recurrent symptoms despite therapeutic

interventions. These ongoing symptoms can significantly diminish both disease-specific and overall quality of life. Although the physical manifestations of achalasia, such as regurgitation, dysphagia, chest pain, ... [Read more...](#)

42. Sex and mental health are related to subcortical brain microstructure

23-07-2024 - National Library of Medicine

Some mental health problems such as depression and anxiety are more common in females, while others such as autism and attention deficit/hyperactivity (AD/H) are more common in males. However, the neurobiological origins of these sex differences are poorly understood. Animal studies have shown substantial sex differences in neuronal and glial cell structure, while human brain imaging studies ... [Read more...](#)

43. Symptoms of anxiety, depression, and post-traumatic stress disorder 6 weeks and 6 months after ICU: Six out of 10 survivors affected

23-07-2024 - National Library of Medicine

CONCLUSION: The burden of mental health disease in ICU survivors is substantial, affecting their HRQOL. Six out of 10 patients experienced symptoms of anxiety, depression and PTSD, and more than half of those affected experienced co-occurrence of the conditions. A third of those affected developed these symptoms only beyond 6 weeks after hospital discharge. A potentially modifiable ... [Read more...](#)

44. The knowledge, attitude, and intention to use internet-based mental health services: A serial mediation model

23-07-2024 - National Library of Medicine

CONCLUSIONS: This study underscores the critical role of knowledge in shaping positive attitudes and intentions to use i-MHS, emphasizing the need for robust mental healthcare promotion strategies to raise knowledge and maximize the benefits of i-MHS. [Read more...](#)

45. Technology-Assisted Mental Health Intervention Delivered by Frontline Workers at Community Doorsteps for Reducing Anxiety and Depression in Rural Pakistan: Protocol for the mPareshan Mixed Methods Implementation Trial

23-07-2024 - National Library of Medicine

CONCLUSIONS: This trial will assess the feasibility of early home-based mental health screening, counseling, and prompt referrals by frontline health workers to reduce anxiety and depression in the community. The study findings will set the stage for integrating mental health into primary health care. [Read more...](#)

46. The relation between mental health and career-related stress among prospective graduates in higher education stage during the COVID-19 pandemic: an evidence based on network analysis

23-07-2024 - National Library of Medicine

INTRODUCTION: The outbreak of the COVID-19 pandemic has disrupted people's routine, bringing uncertainty and stress, leading to mental health issues. This situation is particularly acute among Chinese prospective graduates in higher education stage as they cannot predict the outcomes of their studies, graduation, and career development, and therefore experience career-related stress. 47. The Placebo Effect in Exercise and Mental Health Research

23-07-2024 - National Library of Medicine

This chapter describes the placebo effect in the context of physical activity and mental health. Following a brief historical overview, definitions for placebos, placebo effects, and related terminology are discussed. Next, three major methodological challenges posed from studying the

placebo effect in the context of exercise are described. Additionally, the role of a primary psychological ... [Read more...](#)

48. Access to Psychotherapy Notes: Review of Legal Standards for Mental Health Clinicians

23-07-2024 - National Library of Medicine

Patients' access to their psychotherapy records may be assumed to be well protected however, the matter is intricately regulated. In fact, the statutes and rights pertaining to patient access to psychotherapy notes vary across states. Taken together, federal and state laws indirectly and inconsistently delineate lawful access-as well as clinical exceptions to providing access-to psychotherapy ... [Read more...](#)

49. Development and validation of the Alimetry Gut-Brain Wellbeing Survey: a novel patient-reported mental health scale for patients with chronic gastroduodenal symptoms

23-07-2024 - National Library of Medicine

CONCLUSION: The AGBW Survey is a brief, valid, and reliable scale for assessing mental health in patients with chronic gastroduodenal symptoms. It can be used as a tool to complement physiological tests and has the potential to guide psychological referrals, inform multidisciplinary management, and evaluate treatment outcomes. [Read more...](#)

50. A Scoping Review of Equine-Assisted Therapies on the Mental Health and Well-Being of Autistic Children and Adolescents: Exploring the Possibilities

23-07-2024 - National Library of Medicine

Animals are increasingly being utilized to assist with therapies for people with various health conditions. Horses are often used as a mechanism of engagement and development for autistic children and adolescents. Horses offer a unique opportunity for interaction as the child or adolescent can physically ride and interact with the animal, thus creating a therapy that involves contact that is ... 51. Ethnic Density and Mental Health: Does it Matter Whether the Ethnic Density is Co-ethnic or Multi-ethnic and How Important is Change in Ethnic Density?

23-07-2024 - National Library of Medicine

The ethnic density thesis suggests a protective health benefit for ethnic minorities living in places with higher concentration of co-ethnic residents. This paper aims to make a step change in the examination of this thesis by proposing ethnic diversity rather than co-ethnic density will be more protective for mental health. The paper proposes ethnic diversity could be a community asset that ... [Read more...](#)

52. Sleep and mental health in patients with breast cancer

23-07-2024 - National Library of Medicine

No abstract [Read more...](#)

53. Linking heart and mind - lived experiences of parents to children with congenital heart disease and mental health issues

23-07-2024 - National Library of Medicine

Children with congenital heart disease are more likely to receive special educational services in schools and have an increased risk of mental health issues. We explored the lived experiences of parents caring for a child with heart disease and concurrent mental health issues in Denmark. Semi-structured interviews with ten parents (age 39-57 years) to these children (age 5-17 years) were ... [Read more...](#)

54. Effects of resilience, social support, and academic self-efficacy, on mental health among Peruvian university students during the pandemic: the mediating role of digital inclusion

23-07-2024 - National Library of Medicine

CONCLUSION: Mental health of university students during the pandemic shows alarming levels of general or emotional distress. The findings indicate that resilience, social support and self-efficacy protect college students' mental health by reducing general distress. However, the study shows that when there is a digital divide around internet quality the impact of these factors is affected.

60. Changes in Adolescents' COVID-19-Health-Related Stress, Parent-Adolescent Relationships, and Mental Health During the COVID-19 Pandemic: The Effect of Personality Traits

23-07-2024 - National Library of Medicine

Previous studies investigated short-term effects of COVID-19 on families. However, much is unknown about how families with adolescents fared throughout the pandemic, as well as factors that might explain interindividual differences in adjustment. The current study used latent change score models to investigate associations between changes in adolescents' mental health, ... [Read more...](#)

61. Exploring the Efficacy of Large Language Models in Summarizing Mental Health Counseling Sessions: Benchmark Study

23-07-2024 - National Library of Medicine

CONCLUSIONS: While LLMs fine-tuned specifically on mental health domain data display better performance based on automatic evaluation scores, expert assessments indicate that these models are not yet reliable for clinical application. Further refinement and validation are necessary before their implementation in practice. [Read more...](#)

62. A Framework for Protecting and Promoting Employee Mental Health through Supervisor Supportive Behaviors

23-07-2024 - National Library of Medicine

The attention to workplace mental health is timely given extreme levels of burnout, anxiety, depression and trauma experienced by workers due to serious extraorganizational stressors - the COVID-19 pandemic, threats to climate change, and extreme social and political unrest. Workplace-based risk factors, such as high stress and low support, are contributing factors to poor mental health and ... [Read more...](#)

63. Cognitive interviewing to assess and adapt three measures of mental health symptoms among people living with HIV in Rakai, Uganda: the Thinking a Lot Questionnaire, the Patient Health Questionnaire 9 (PHQ-9), and the Hopkins Symptoms Checklist (HSCL)

23-07-2024 - National Library of Medicine

Mental health is conceptualized differently across cultures, making cross-cultural validation of screening tools critical. In Uganda, we used cognitive interviewing to assess and adapt three scales for measuring psychological distress: the Thinking a Lot Questionnaire, the Patient Health Questionnaire 9 (PHQ-9), and the Hopkins Symptoms Checklist (HSCL). We recruited 12 people living with HIV ... [Read more...](#)

64. Mental Health Care Resource Utilization of Victims of Interpersonal Violence in the Novel Coronavirus Era

23-07-2024 - National Library of Medicine

CONCLUSIONS: Racial and socioeconomic disparities were amplified and MH resource utilization was lower during COVID. Further injury prevention efforts should be focused on MH in future pandemics or disasters. [Read more...](#)

65. Perceived ambidextrous leadership and nurses' mental health: a work-family perspective

23-07-2024 - National Library of Medicine

CONCLUSION: Nursing supervisors' ambidextrous leadership interacted with work climate for sharing family concerns benefit the conservation of nurses' personal resources, which in turn facilitates nurses' work-to-family enrichment and improve their mental health. [Read more...](#)

66. Suicide-related internet use among mental health patients who died by suicide in the UK: a national clinical survey with case-control analysis

23-07-2024 - National Library of Medicine

BACKGROUND: Suicide-related internet use (SRIU) has been shown to be linked to suicide. However, there is limited research on SRIU among mental health patients, who are at 4 to 7 times increased risk of suicide compared to the general population. This study aims to address this gap by exploring the prevalence of SRIU among mental health patients who died by suicide in the UK and describing ... [Read more...](#)

67. Stress perception and associated factors among patients with Parkinson's disease: a cross-sectional study after the COVID-19 pandemic

23-07-2024 - BioMed Central

Parkinson's disease (PD) is a serious neurodegenerative disease that brings great stress to the physical and mental health of patients. At the same time, long-term treatment will also bring great economic loss... [Read more...](#)

68. Symptoms, work situation and work functioning 10 years after rehabilitation of stress-induced exhaustion disorder

CONCLUSION: The results provide further support for investigating what maintains trauma symptoms and what to target in treatment. This may have clinical implications for our theoretical and practical understanding of PTSD. [Read more...](#)

70. Racial discrimination and mental health in the context of anti-Asian xenophobia: An intersecting approach of race, ethnicity, nativity, and socioeconomic status

22-07-2024 - National Library of Medicine

The COVID-19 pandemic, polarized politics, and heightened stigma and discrimination are salient drivers for negative mental health outcomes, particularly among marginalized racial and ethnic minoritized groups. Intersectionality of race, ethnicity, foreign-born status, and educational attainment may distinctively shape an individual's experience of discrimination and mental health during such ... 71. Attitudes of the general population and mental health practitioners towards blended therapy in Austria

22-07-2024 - National Library of Medicine

CONCLUSION: Practitioners' attitudes are important for implementation of blended therapy. More awareness might help against the cautiousness as well as implementing digital health applications in Austrian health policies. [Read more...](#)

72. "Is there a Link Between Heat Waves and Mental Health Emergencies in the Emergency Department?"

22-07-2024 - National Library of Medicine

CONCLUSION: Beyond the results identified during heatwaves, our extensive analysis of the examined ED revealed no additional significant effects of heat on psychiatric emergencies. This contradicts findings from other studies. Other systemic influences, such as the utilization of the ED during the Covid-19 pandemic, could have modified the results. [Read more...](#)

73. Parenthood and the Physical and Mental Health of Sexual and Gender Minority Parents: A Cross-Sectional, Observational Analysis from The PRIDE Study

22-07-2024 - National Library of Medicine

CONCLUSIONS: In this national cohort of SGM adults, parenthood was associated with differences in physical and mental health measures. Understanding how parenthood influences the health and well-being of the estimated 3 million SGM parents in the US will help our health systems support diverse families. [Read more...](#)

74. Responding to the needs of survivors of intimate partner violence in Lithuania: perceptions of mental health and social care professionals

22-07-2024 - National Library of Medicine

Around eight-out-of-ten survivors of domestic violence in Lithuania are women, and of those, eight-out-of-ten suffer violence specifically from their intimate partners (IPV). Women who experience IPV are at higher risk of having mental health conditions. This study aims to explore the perspectives of mental health and social care professionals regarding the provision of mental health support ... [Read more...](#)

75. Enhancing Transition to Nursing Practice: The Mental Health Immersion Experience

22-07-2024 - National Library of Medicine

The number of people facing mental health issues continues to grow in the aftermath of COVID-19. Nurses are challenged with providing care for an increasing number of patients, including veterans, with complex mental health needs across healthcare settings. Of concern, many students transitioning into practice feel they lack the necessary confidence, education, ... [Read more...](#)

76. Mental Health Professionals' Perspectives on Group Intervention for Women Survivors of Intimate Partner Violence: A Qualitative Study

22-07-2024 - National Library of Medicine

CONCLUSION: Experts emphasized the importance of a holistic approach to IPV intervention. Group intervention addresses multiple issues that contribute to violence. Survivors need safe housing, counseling, legal help, and financial assistance. [Read more...](#)

77. The PROMIS-10 Mental Health T-Score an Independent Predictor of Recovery for Up to 1 Year following Elective Lumbar Spine Fusion

22-07-2024 - National Library of Medicine

CONCLUSION: The MHT was an independent predictor of pain, satisfaction, and ODI scores for up to 1 year post fusion, while a mental disorder diagnosis was not. An MHT score below 40 may be risk factor for patients undergoing elective lumbar fusion. [Read more...](#)

78. Uptake of COVID-19 vaccination among community-dwelling individuals receiving healthcare for substance use disorder and major mental illness: a matched retrospective cohort study

22-07-2024 - National Library of Medicine

INTRODUCTION: Patients with major mental illness (MMI) and substance use disorders (SUD) face barriers in accessing healthcare. In this population-based retrospective cohort study, we investigated the uptake of COVID-19 vaccination in Ontario, Canada among community-dwelling individuals receiving healthcare for major mental illness (MMI) and/or substance use disorders (SUD), ... 79. Incident pregnancy and mental health among adolescent girls and young women in rural KwaZulu-Natal, South Africa: an observational cohort study

22-07-2024 - National Library of Medicine

Pregnancy can place adolescent girls and young women (AGYW) at risk of poor mental health. However, evidence linking youth pregnancy to mental health in resource-limited settings is limited, especially where HIV incidence is high. We analysed a population-representative cohort of AGYW aged 13-25 in rural KwaZulu-Natal to assess how adolescent pregnancy predicts subsequent mental health. [Read more...](#)

80. Mediating mechanism of posttraumatic growth as buffers of burnout and PTSD among nurses during the COVID-19 pandemic

22-07-2024 - National Library of Medicine

CONCLUSION: Based on the results, it has been supported that deliberate rumination, emotional expression, and adaptive CER should be addressed as important variables in psychological interventions addressing nurses' adversities during the pandemic. These variables can prevent BO and PS by facilitating PTG. [Read more...](#)

81. Residential natural hazard risk and mental health effects

22-07-2024 - National Library of Medicine

Mental health effects are frequently reported following natural disasters. However, little is known about effects of living in a hazard-prone region on mental health. We analyzed data from 9,312 Gulf Long-term Follow-up Study participants who completed standardized mental health questionnaires including the Patient Health Questionnaire-9 (depression=score \geq 10), ... 82. Primary Care Quality Improvement Through Patient-Centered Medical Homes and the Impact on Emergency Department Utilization for Children With Autism and Mental Health Disorders

22-07-2024 - National Library of Medicine

CONCLUSIONS: Primary care quality improvement through access to a PCMH reduced ED visits for children, but the effect varied by autism and MHD conditions. Future PCMH efforts should continue to support children with autism and address unmet needs for children with MHDs with a focus on needed care coordination, family-centered care, and referrals. [Read more...](#)

83. Long-term Exposure to Ambient Air Pollution and its Association with Mental Well-Being, Depression and Anxiety: A Nationally Representative Study

22-07-2024 - National Library of Medicine

CONCLUSION: We did not find statistically significant associations between long-term exposure to PM10 and mental well-being or the frequency of probable diagnosis of common mental disorders. These results may be explained by the reduced variability in the exposure values, given the geographical distribution and functioning of the network of air quality monitoring stations. [Read more...](#)

84. Psychosocial Care Delivery in Intensive Home Treatment During a Mental Health Crisis: A Qualitative Thematic Analysis

22-07-2024 - National Library of Medicine

Community-based intensive home treatment (IHT) is delivered as an alternative to psychiatric hospital admission as part of crisis resolution services. People receiving IHT present with complex mental health issues and are acutely distressed. Home treatment options are often preferred and there is evidence of service fidelity, although less is known about psychosocial care in this setting. [Read more...](#)

85. Planetary Health and Mental Health Nexus: Least Understood and Embraced in Policy Decisions

22-07-2024 - National Library of Medicine

Planetary health influences mental health and a better management of climate, biodiversity and pollution has co-benefits of improving mental health outcomes. The recognition and treatment of mental health, however, has been marginalized within environmental and climate change sciences and a greater understanding of the complex underlying processes and societal costs is required to ... 86. Predictors of All-Cause 30-Day Readmissions in Patients with Heart Failure at an Urban Safety Net Hospital: The Importance of Social Determinants of Health and Mental Health

22-07-2024 - National Library of Medicine

CONCLUSION: Race/ethnicity, housing status, and substance use were associated with increased risk of 30-day all-cause readmission in HF patients in a safety net hospital. In contrast to prior studies, medical comorbidities were not associated with increased risk of readmission. [Read more...](#)

87. Exploring the relationship between YouTube video characteristics and a viewer's mental health traits among young adults

22-07-2024 - National Library of Medicine

We investigated the relationship between individuals' mental health traits and the characteristics of YouTube videos they watch. The mental health traits considered were stress, depression, anxiety, and self-esteem, which were measured using a survey questionnaire. We considered violence shown in a video, brightness and saturation of a video as video characteristics. [Read more...](#)

88. The Impact of User Engagement With Exposure Components on Posttraumatic Stress Symptoms in an mHealth Mobile App: Secondary Analysis of a Randomized Controlled Trial

22-07-2024 - National Library of Medicine

CONCLUSIONS: To our knowledge, this is the first study to show a relationship between symptom improvement and engagement with the active therapeutic components of an mHealth app (ie, exposure) for PTSD. This relationship held when controlling for overall app use, which suggests that it was engagement with exposure, specifically, that was associated with symptom change. [Read more...](#)

89. Opioid misuse and mental health in college student populations: A national assessment

22-07-2024 - National Library of Medicine

CONCLUSIONS: This large, multi-campus study underlines the need for more partnership between substance use and mental health services on campus. It also highlights that college peers could receive training in ways to best help students who misuse opioids, directing them to on- or off-campus care. [Read more...](#)

90. Migration and Mental Health in Two Contemporary Memoirs

22-07-2024 - National Library of Medicine

This article examines two autobiographical texts that address the relationship between migration and struggles with mental health: Karla Cornejo Villavicencio's *The Undocumented Americans* (2021) and Dina Nayeri's *The Ungrateful Refugee: What Immigrants Never Tell You* (2020). Both memoirs help bring mental health issues to light in situations of precarity, and the texts indicate that it is not ... [Read more...](#)

91. The Subaltern: Illuminating matters of representation and agency in mental health nursing through a postcolonial feminist lens

22-07-2024 - National Library of Medicine

Inpatient mental health nursing operates with an overarching goal to support people living with mental health challenges by managing risk of harm to self and others, decreasing symptoms, and promoting capacity to live outside of hospital settings. Yet, dominant, harmful stereotypes persist, constructing patients as less than, in need of saving, and lacking self-control and agency. [Read more...](#)

92. Pharmaceuticalization and Care Coordination in New York City Outpatient Mental Health

22-07-2024 - National Library of Medicine

US government quality measures prioritize pharmaceuticalization and care coordination to promote patient treatment adherence. How these measures affect outpatient mental health service delivery and patient-provider communication where psychiatrists and nonphysicians collaborate is understudied. Analyzing 500 hours of participant-observation, 117 appointments, ... [Read more...](#)

93. Is the Norwegian stepped care model for allocation of patients with mental health problems working as intended? A cross-sectional study

22-07-2024 - National Library of Medicine

CONCLUSION: The limited association between treatment level and symptoms and functional impairment reveals inconsistencies between treatment guidelines and clinical practice. How the existing organization affects patient outcomes and satisfaction should be investigated further. [Read more...](#)

94. Factors influencing mental health service delivery during public health emergencies: a scoping review protocol

22-07-2024 - National Library of Medicine

CONCLUSIONS: Considering the diverse research methodologies and the varied applicability of services in different contexts of PHEs, this review will offer insights into the type, effectiveness, and implementation barriers and facilitators of mental health interventions and supports delivered during PHEs. By employing the "Four Ss" framework, the review will guide decision-making bodies in ... [Read more...](#)

95. Depression, Anxiety, Stress, and Pain Severity in Patients With Recurrent Aphthous Stomatitis: A Cross-Sectional Study

22-07-2024 - National Library of Medicine

Background Recurrent aphthous stomatitis (RAS) is a chronic oral ulcerative condition with an elusive etiology that is associated with excruciating pain. Psychological factors have been suspected as a possible risk factor in its onset and development. Depression, anxiety, and stress play pivotal roles in how people experience pain. Hence, we aimed to explore the relationship between ... [Read more...](#)

96. Research progress on the association between screen content and mental health issue in children and adolescents

22-07-2024 - National Library of Medicine

With the wide use of screen media, screen exposure shows a trend of younger age, and the screen exposure of children and adolescents has become a global public health issue of concern. Childhood and adolescence are important stages of growth and development, as well as critical periods of cognitive ability, emotional development and socialization. Previous studies have shown that screen time ... [Read more...](#)

97. Characteristics of quality improvement interventions to improve physical healthcare in mental health settings: a scoping review protocol

22-07-2024 - National Library of Medicine

INTRODUCTION: Mental health concerns globally impact millions of people, resulting in significant financial impact and adverse health outcomes. People living with mental health concerns are at higher risk of developing physical health issues, which can lead to a shortened life expectancy. Barriers to physical healthcare, such as limited service capacity, low help seeking and stigma, ... [Read more...](#)

98. The impact of cognitive fusion on stress among nurses: Exploring gender as a moderator controlling for depressive symptoms

22-07-2024 - National Library of Medicine

CONCLUSION: This study underscores the importance of cognitive fusion in understanding and managing stress among nurses. The moderating effect of gender highlights the need for tailored interventions. Reducing stress among nurses may benefit their mental health and potentially enhance patient care and treatment outcomes. IMPLICATIONS FOR NURSING PRACTICE AND POLICY: The study highlights ... Prevention and mental well-being

Prevention and mental well-being

1. Mental well-being of children and adolescents during COVID-19: evidence from the Italian context and possible future developments

25-07-2024 - National Library of Medicine

The article aims to discuss the increased emergence of mental health problems among children and adolescents, as an outcome of the COVID-19 pandemic. The results of a research study conducted among various professionals, such as psychiatrists and psychologists specialized in childhood and adolescence, are presented. The study, which uses both qualitative and quantitative methods, ... [Read more...](#)

2. Shame and depressive symptoms in men: The moderating role of environmental mastery and purpose in life

24-07-2024 - National Library of Medicine

CONCLUSIONS: Our findings suggest that promoting a sense of psychological wellbeing in men may confer protective proximal effects in the context of shame, potentially attenuating depression severity. The current study aligns with calls for strength-based approaches to reducing mental health problems in men. [Read more...](#)

3. Relationship between cyberbullying, anxiety, and depression among university students in Jeddah, Saudi Arabia: A cross-sectional study

23-07-2024 - National Library of Medicine

CONCLUSION: A considerable number of university students were found to be victims of cyberbullying, with a strong correlation between cyberbullying and anxiety, depression, and stress, indicating a potential impact on the psychological well-being of students. To address this issue, increased awareness of cyberbullying is needed, along with implementation of preventive measures such as ... [Read more...](#)

4. HIV vulnerabilities and psychosocial health among young transgender women in Lima, Peru: results from a bio-behavioural survey

23-07-2024 - National Library of Medicine

CONCLUSIONS: Findings show that the HIV epidemic for YTW in Lima, Peru is situated in the context of widespread social exclusion, including economic vulnerabilities, violence victimization and the mental health sequelae of transphobic stigma that starts early in life. Future research should aim to further understand the intersection of these vulnerabilities. Moreover, ... [Read more...](#)

5. Can an Online Course, Life101: Mental and Physical Self-Care, Improve the Well-Being of College Students?

23-07-2024 - National Library of Medicine

The COVID-19 pandemic has had a significant impact on the mental health of college students worldwide. As colleges shifted to online instruction, students faced disruptions and increased stressors, leading to a decline in mental health that appears to continue in the postpandemic era. To alleviate this problem, academic institutions have implemented various interventions to address mental ... [Read more...](#)

6. Professional psychological qualities of Chinese medical students: theoretical models, questionnaire development, and relationship with mental health

22-07-2024 - National Library of Medicine

INTRODUCTION: Professional psychological qualities are crucial for individuals' career development and overall well-being, especially in clinical medical professions. Medical students often face significant work, academic, and doctor-patient communication pressures, which can challenge their mental and emotional health. Measuring and understanding the relationship between medical students' ... [Read more...](#)

7. The role of adolescents' mental health and well-being in predicting their smoking status

21-07-2024 - National Library of Medicine

CONCLUSIONS: Adolescents' mental health affects their tobacco use at the level of 2.3 %. A significant relationship was noted across the adolescents' mental health and their perceptions towards smoking. [Read more...](#)

8. The relationship between emotional intelligence, resilience, and psychological distress among nurses in Jordan

21-07-2024 - National Library of Medicine

CONCLUSION: Emotional intelligence is critical to nurses' well-being. Higher emotional intelligence is associated with higher resilience and lower levels of depression, anxiety, and stress among nurses. Interventions and education programs emphasizing emotional intelligence and resilience are essential to improving their mental health. Healthcare organizations and governments should promote ... 10. Merck Animal Health Veterinary Team study reveals factors associated with well-being, burnout, and mental health among nonveterinarian practice team members

20-07-2024 - National Library of Medicine

CONCLUSIONS: Serious psychological distress was common among practice team members. Financial stress may play a role. Burnout and low levels of well-being were also common. [Read more...](#)

11. Virtues as protective factors for adolescent mental health

20-07-2024 - National Library of Medicine

This paper explores the decline in adolescent mental health and the weakening of traditional moral frameworks, positing education in the virtues as protective of mental health due to the intrinsic link between moral/existential wellbeing and psychological health. By integrating character education into school curricula, a continuous "dosage" of moral guidance may be an optimal way to ensure a ... [Read more...](#)

12. Investigating the role of organizational stress in nurses' psychosomatic complaints: Evidence from a study in northeastern Italy

19-07-2024 - National Library of Medicine

CONCLUSION: This study highlights the critical role of addressing organizational stressors, particularly those related to interpersonal relationships, in promoting nurse well-being and optimizing patient care delivery. Despite its strengths, including the use of a well-established measurement tool and a comprehensive assessment of psychosomatic complaints, limitations such as the ... [Read more...](#)

13. Resilience and social support as protective factors against suicidal ideation among tertiary students during COVID-19: a cross-sectional study

19-07-2024 - National Library of Medicine

CONCLUSIONS: The findings stress the importance of one's resilience and social support and explain why some people manage to maintain mental well-being despite finding themselves in difficult life circumstances, which was the case for many tertiary students during the COVID-19 pandemic. These insights may inform preventive efforts against developing suicidal ideation and may be used as ... [Read more...](#)

14. Behaviour and welfare assessment of autochthonous slow-growing rabbits: The role of housing systems

18-07-2024 - Public Library of Science (PLoS)

by Laura Ozella, Stefano Sartore, Elisabetta Macchi, Isabella Manenti, Silvia Mioletti, Barbara Miniscalco, Riccardo Crosetto, Patrizia Ponzio, Edoardo Fiorilla, Cecilia Mugnai Understanding the farming system impact on animals is crucial for evaluating welfare. Rabbits exhibit distinct behaviours influenced by their surroundings. The conditions in which they are raised directly influence ... [Read more...](#)

15. Adolescents perception of the COVID-19 pandemic restrictions and associated mental health and well-being: gender, age and socioeconomic differences in 22 countries

18-07-2024 - National Library of Medicine

CONCLUSIONS: The majority of adolescents perceived the pandemic measures as neutral or positive. Girls, 15-year-old adolescents, and those with low socioeconomic status were at higher risk of suffering from pandemic measures and associated problems of loneliness, multiple health complaints, and low life satisfaction. We conclude that adolescent's mental health and well-being should be ... [Read more...](#)

16. The pooled prevalence of attention-deficit/hyperactivity disorder among children and adolescents in Ethiopia: A systematic review and meta-analysis

18-07-2024 - National Library of Medicine

CONCLUSIONS: The overall pooled prevalence of attention-deficit/hyperactivity disorder among children and adolescents is high in Ethiopia as compared to previous literature. To reduce the prevalence of attention-deficit/hyperactivity disorder among children and adolescents, emphasis has to be given to prevention, early detection, and management of pregnancy-related complications. [Read more...](#)

17. 'I'm So Proud of How Hard You're Trying': A Photovoice Analysis of Youth Mental Health and Wellness in Wisconsin

18-07-2024 - National Library of Medicine

Understanding youth and young adult mental health and well-being is critical to addressing rates of suicide among this population. This qualitative study sought to gather additional perspectives of students across Wisconsin using photovoice methods to enhance understanding of their experiences and to inform future policies and programs. A total of 11 youth and young adults ages 14 to 26 ... [Read more...](#)

18. Characteristics of mental health literacy measurement in youth: a scoping review of school-based surveys

18-07-2024 - National Library of Medicine

Mental health literacy (MHL) was introduced 25 years ago as knowledge and beliefs about mental disorders which aid in their recognition, management, or prevention. This scoping review mapped the peer-reviewed literature to assess characteristics of secondary school-based surveys in school-attending youth and explore components of school-based programs for fostering MHL in this population. [Read more...](#)

19. The burden and its determinants of mental health distress among adolescents dwelling in Africa: a systematic review and meta-analysis

18-07-2024 - National Library of Medicine

CONCLUSION: The findings indicate a high prevalence of mental health distress among adolescents in Africa, highlighting the widespread impact on this demographic. These results underscore the urgent need for targeted interventions to prevent and address mental health distress among adolescents. Further research on a global scale is essential to develop effective prevention and treatment ... [Read more...](#)

20. Assessment of a Pilot Peer Support Program for Suicide Prevention on a Medical School Campus: Impact on Awareness, Stigma, and Self-Efficacy for Outreach

18-07-2024 - National Library of Medicine

With the continued rise in mental health concerns, including suicide on college campuses nationwide, many academic institutions have developed peer-support programs. Correspondingly,

the Medical College of Wisconsin developed and evaluated Seeking Peer Outreach* as its pioneer suicide prevention initiative. Seeking Peer Outreach* is an innovative approach to provide all medical students ... [Read more...](#)

21. Evaluating well-being and psychosocial risks in academia: Is management the "forgotten phase"?

18-07-2024 - National Library of Medicine

In recent years, there has been a noticeable increase in attention towards promoting well-being within academic settings. In the specific context of academia, a critical issue is understanding whether the current practices for assessing and managing well-being can bridge the implementation gap and increase opportunities for creating healthy academic conditions. [Read more...](#)

22. The relationship between line manager training in mental health and organisational outcomes

17-07-2024 - Public Library of Science (PLoS)

by Juliet Hassard, Teixiera Dulal-Arthur, Jane Bourke, Maria Wishart, Stephen Roper, Vicki Belt, Stavroula Leka, Nick Pahl, Craig Bartle, Louise Thomson, Holly Blake Background Line manager (LM) training in mental health is gaining recognition as an effective method for improving the mental health and wellbeing of workers. However, research predominantly focuses on the impacts of training at ... [Read more...](#)

23. Health Problems of Professional Ballet Dancers: an Analysis of 1627 Weekly Self-Reports on Injuries, Illnesses and Mental Health Problems During One Season

17-07-2024 - National Library of Medicine

CONCLUSION: Preventive interventions are urgently required to reduce the prevalence of health problems and especially injuries of professional dancers. Injury prevention measures should regard the balance of the load capacity of professional dancers and the workload in training, rehearsals and performances. [Read more...](#)

24. Practitioner Review: Continuity of mental health care from childhood to adulthood for youths with ADHD - who, how and when?

17-07-2024 - National Library of Medicine

Many youths with attention-deficit/hyperactivity disorder (ADHD) experience significant long-term impairment and may develop concurrent mental and somatic health difficulties as adults. This is associated with burden and costs for the individual and society which could be prevented through continued support in youth. Yet, only few young people transition to adult mental health services for ... [Read more...](#)

25. Depressive symptoms predict cannabis vaping initiation among young adults

17-07-2024 - National Library of Medicine

CONCLUSION: Findings indicate that initiation of cannabis vaping during young adulthood is common, and particularly more likely among those with greater depressive symptoms, thus underscoring the importance of prevention programs that include mental health support services tailored to young adults. [Read more...](#)

35. Loneliness and social isolation: exploring the experiences of older women during the pandemic in terms of social connection, feeling of loneliness, and the impact on mental health and wellbeing

15-07-2024 - National Library of Medicine

CONCLUSION: The study highlights the significant impact of loneliness and social isolation on the mental health of older women during the COVID-19 pandemic, emphasizing the need for targeted interventions and support systems. [Read more...](#)

36. Branching out: mobilizing community assets to support the mental health and wellbeing of children in primary schools

15-07-2024 - National Library of Medicine

INTRODUCTION: Mobilizing existing creative, cultural and community assets is seen as a crucial pathway to improving public health. Schools have been identified as key institutional community assets and arts-in-nature practice has been shown to promote children's mental health. The 'Branching Out' research investigated how an established arts-in-nature practice called 'Artscaping' could be ... [Read more...](#)

37. Bidirectional Associations Between Mental Health Disorders and Chronic Diabetic Complications in Individuals With Type 1 or Type 2 Diabetes

15-07-2024 - National Library of Medicine

CONCLUSIONS: We found a consistent bidirectional association between CDCs and MHDs across the life span, highlighting the important relationship between CDCs and MHDs. Prevention and treatment of either comorbidity may help reduce the risk of developing the other. [Read more...](#)

38. A Mixed-Methods Cohort Study Evaluating the Impact of a One-Day Well-Being Course for Anesthesia Providers Working in Low-Resource Settings

15-07-2024 - National Library of Medicine

CONCLUSIONS: Causes of burnout are complex and multidimensional. VAST Wellbeing did not change measures of burnout and fulfillment 2 months postcourse but did have a meaningful impact by raising awareness, reducing stigma, fostering connection, providing skills to prioritize personal well-being, and empowering people to seek workplace change. [Read more...](#)

39. Pilot evaluation of a Psychological First Aid online training for COVID-19 frontline workers in American Indian/Alaska Native communities

15-07-2024 - National Library of Medicine

INTRODUCTION: The COVID-19 pandemic exacerbated mental health concerns and stress among American Indians and Alaska Natives (AI/ANs) in the United States, as well as among

frontline workers responding to the pandemic. Psychological First Aid (PFA) is a promising intervention to support mental wellbeing and coping skills during and after traumatic events, such as the COVID-19 pandemic. [Read more...](#)

40. The Impact of Stressors on Depressive Symptoms Among Youth Myanmar Migrant Workers in Thailand: A Cross-Sectional Study

15-07-2024 - National Library of Medicine

CONCLUSION: According to hierarchical linear regression analysis, workplace, security, and living stressors significantly increased depressive symptoms scores, whereas self-esteem decreased depressive symptoms scores among young 165 Myanmar migrant workers. Therefore, policymakers should be encouraged to establish preventive measures against specific stressors. [Read more...](#)

41. Healing Stitches: A Scoping Review on the Impact of Needlecraft on Mental Health and Well-Being

15-07-2024 - National Library of Medicine

Encompassing many crafts, needlecraft has been popular, particularly amongst women, for centuries. This scoping review mapped and explored primary research on sewing, crocheting, knitting, lacemaking, embroidery and quilting and its impact on mental health and well-being. A comprehensive systematic search across PubMed, CINAHL, Scopus and Google Scholar was conducted in January 2024, ... [Read more...](#)

42. Beyond Belief and Practice: An Exploratory Literature Review and Discussion of the Differential Impact of Spirituality and Religiosity on Mental Health Disorders

14-07-2024 - National Library of Medicine

The relationship between spirituality and religiosity and their impact on mental health is intricate and underexplored. This exploratory review aims to elucidate the distinct effects of these constructs, highlighting their contributions to psychological well-being and clinical practices. By dissecting the impacts of spirituality and religiosity on mental health, ... [Read more...](#)

43. A Systematic Literature Review of Strategies Implemented in Extended Education Settings to Address Children's Mental Health and Wellbeing

14-07-2024 - National Library of Medicine

Mental health and wellbeing problems in middle childhood are increasing worldwide which needs more support than just clinical services. Early intervention has been explored in other settings, but not in extended education care settings such as outside school hours care (OSHC). A systematic literature review was undertaken to determine what interventions have been tested in extended education ... [Read more...](#)

44. Admiration and motivation: key factors in managing PTSD among firefighters

14-07-2024 - National Library of Medicine

Post-traumatic stress disorder (PTSD) presents a significant challenge for firefighters. While research suggests that admiration may have a positive impact on individual psychological well-being, its specific influence on PTSD among firefighters remains unexplored. This study aims to investigate the association between admiration, motivation (both internal and external), ... [Read more...](#)

45. Conducting mental health research with rural and regional older Australians: Reflections and recommendations

14-07-2024 - National Library of Medicine

CONCLUSION: By adopting recommendations, researchers can maximise accessibility to and possible participation in mental health research, providing foundations for older rural Australians'

contributions to inform the development of policies and strategies to promote their health and well-being. [Read more...](#)

46. Adolescent Health in the Post-Pandemic Era: Evolving Stressors, Interventions, and Prevention Strategies amid Rising Depression and Suicidality

13-07-2024 - National Library of Medicine

Prior to COVID-19, there were already increasing rates of youth with mental health concerns, including an increase in youth presenting to medical emergency departments (EDs) with mental health chief complaints and limited access to treatment. This trend worsened during the pandemic, and rates of youth presenting to medical EDs with suicidal ideation and self-harm increased 50% from 2019 to 2022. [Read more...](#)

47. Effects of mass casualty incidents on anxiety, depression, and post-traumatic stress disorder among doctors and nurses: a systematic review

13-07-2024 - National Library of Medicine

CONCLUSIONS: MCIs have a significant impact on the mental health outcomes of emergency health workers. Preventive measures should be designed considering the high-risk group, personal, and organizational risk factors of mental health outcomes. [Read more...](#)

48. Productive Messaging to Promote Youth Mental Well-Being and Positive Development in Clinical and Advocacy Settings

13-07-2024 - National Library of Medicine

In the adolescent mental health crisis, negative narrative communication has unintended consequences. Supportive communication involves reframing communications to find a new narrative that does not evoke biases. This narrative must emphasize agency and highlight the strengths, potential, and common experiences of young people. It is clear that supporting positive development and well-being is ... 49. Support for Mental Health and Well-Being in the Transition to Residency

12-07-2024 - National Library of Medicine

No abstract [Read more...](#)

50. Adolescent mental health interventions: a narrative review of the positive effects of physical activity and implementation strategies

12-07-2024 - National Library of Medicine

INTRODUCTION: The psychological well-being of adolescents is a global concern due to increasing societal pressures and mental health issues. Physical activity is known to enhance physical health and has potential benefits for mental health, including reducing symptoms of anxiety and depression, boosting self-esteem, and improving social skills. This narrative review explores how physical ... [Read more...](#)

51. Use of an Opt-Out vs Opt-In Strategy Increases Use of Residency Mental Health Services

12-07-2024 - National Library of Medicine

Background Residents report high levels of distress but low utilization of mental health services. Prior research has shown several barriers that prevent residents from opting into available mental health services. Objective To determine the impact of a mental health initiative centered around an opt-out versus an opt-in approach to help-seeking, on the use of psychotherapy. [Read more...](#)

52. COVID-19 Pandemic Quarantines and Mental Health Among Adolescents in Norway

12-07-2024 - National Library of Medicine

CONCLUSIONS AND RELEVANCE: In this study, younger adolescents, those with parents with lower education, or those with low genetic liability for depression appeared more vulnerable when being quarantined several times. These findings emphasize the need for targeted support strategies to better protect adolescent well-being during future crises. Adolescents who experienced increased mental ... [Read more...](#)

53. Intersectionality informed and narrative-shifting whole school approaches for LGBTQ+ secondary school student mental health: A UK qualitative study

11-07-2024 - Public Library of Science (PLoS)

by Amy Morgan, Emily Cunningham, Juliet Dyrud, Liberty Elliott, Lauren Ige, Gemma Knowles, Lukasz Konieczka, Angela Mascolo, Ibrahim Sabra, Sara Sabra, E. Singh, Katharine A. Rimes, Charlotte Woodhead School is a key site for prevention and early intervention in public mental health, with sexual and gender minority students being a priority group for action. Context is important in ... [Read more...](#)

54. Mental health index of the elderly population in Medellin (Colombia)-2021: a factorial analysis

11-07-2024 - National Library of Medicine

CONCLUSION: A quantitative model was developed to predict either a positive or negative prognosis in the mental wellbeing of the population over 60 years of age in the city of Medellín. The model was also used for the development of a sociodemographic profile highlighting the impact on mental health among people over 60 years of age with limited economic resources. [Read more...](#)

55. A two-pronged approach to understanding reciprocity and mental health relationship in developing countries: evidence from young informal construction workers in Nigeria

11-07-2024 - National Library of Medicine

CONCLUSIONS: This study fills important gaps in understanding how social relationships impact mental health in developing country contexts. Findings emphasize the role of collective action and community-based support systems in promoting mental wellbeing among vulnerable populations. Insights can inform culturally relevant, systems-level mental health interventions. [Read more...](#)

56. Mental Health Stigma in the Workplace and its Association with Possible Actions of Managers to Prevent Sickness Absence of Employees with Mental Health Problems in the Swedish Private Sector: a Video Vignette Study

11-07-2024 - National Library of Medicine

CONCLUSION: This study substantiated the role of personal stigmatizing attitudes and contextual stigma in relation to possible actions of managers to prevent SA of employees with MHPs. The results emphasize the role of contextual stigma. Implications for practice and research are discussed. [Read more...](#)

57. Correction: A microcosting approach for planning and implementing community-based mental health prevention programs: what does it cost?

10-07-2024 - National Library of Medicine

No abstract [Read more...](#)

58. The General Neurocognitive Decline in Patients with Methamphetamine Use and Transient Methamphetamine-induced Psychosis Primarily Determined by Oxidative and AGE-RAGE Stress

10-07-2024 - National Library of Medicine

CONCLUSION: The use of MA induced mild cognitive impairments through MA-induced activation of detrimental outcome pathways, including oxidative and AGE-RAGE stress, and suppression of protective antioxidant pathways. Increased MPO, oxidative, and AGE-RAGE stress are new drug targets to prevent neurocognitive deficits and psychosis due to MA use. [Read more...](#)

59. Impact of a mindfulness-based intervention on well-being and mental health of elementary school children: results from a randomized cluster trial

10-07-2024 - National Library of Medicine

Prevention programs, such as mindfulness-based interventions (MBIs), are often implemented in schools to prevent psychological disorders from emerging in children and to support their mental health. This study used a randomized cluster design to evaluate the impact of a MBI, called Mission Méditation, on the well-being and the mental health of elementary school children's. [Read more...](#)

60. Neuroimage Analysis Methods and Artificial Intelligence Techniques for Reliable Biomarkers and Accurate Diagnosis of Schizophrenia: Achievements Made by Chinese Scholars Around the Past Decade

10-07-2024 - National Library of Medicine

CONCLUSIONS: We offer a valuable review of advanced neuroimage analysis and AI methods primarily focused on SZ research by Chinese scholars, aiming to promote the diagnosis, treatment, and prevention of SZ, as well as other mental disorders, both within China and internationally. [Read more...](#)

61. Assessing the impact of small firm dynamics on public mental health amid the pandemic in Latin America

10-07-2024 - National Library of Medicine

CONCLUSIONS: Our findings suggest a strong association between different indicators of psychological well-being and the level of activity in different sectors of the economy. Given the essential role of small and medium-sized enterprises (SMEs) in generating employment, especially during crises like the pandemic, it is imperative that they remain resilient and adaptable to support economic ... 62. COVID-related disruptions and adaptations to prison-based mental health and substance use services: a narrative review

10-07-2024 - National Library of Medicine

PURPOSE: Public health experts and advocates have long raised concerns about the pandemic preparedness of prison systems worldwide - an issue that became increasingly salient at the start of the COVID-19 pandemic. People in prison experience poorer health outcomes compared to the general population, making timely access to adequate health services in prison critical for their health and wellbeing. [Read more...](#)

63. A web-based video messaging intervention for suicide prevention in men: study protocol for a five-armed randomised controlled trial

09-07-2024 - National Library of Medicine

BACKGROUND: More than 50% of people who die by suicide have not been in contact with formal mental health services. The rate of people who fly 'under the radar' of mental health services is higher among men than women, indicating a need to improve engagement strategies targeted towards men who experience suicidal thoughts and/or behaviours. In Australia, a range of mental health support ... [Read more...](#)

64. The Effects of Mentoring Programs on Mental Health in Undergraduate Nursing Students: An Integrative Review

09-07-2024 - National Library of Medicine

CONCLUSION: Mentoring programs have positive effects on mental health outcomes in undergraduate nursing students. Implementation of structured programs at the start of undergraduate studies can facilitate increased mental and physical well-being and decrease stress and anxiety. [Read more...](#)

65. Reducing neuroendocrine psychosocial stress response through socio-emotional dyadic but not mindfulness online training

09-07-2024 - National Library of Medicine

INTRODUCTION: Stress-related diseases pose significant health risks and show wide prevalence. Empirical evidence suggests that contemplative practices, such as socio-emotional dyadic mental exercises, hold promise in mitigating the adverse effects of stress and promoting psychosocial well-being. This study aimed to investigate the differential effects of two online contemplative mental ... [Read more...](#)

66. Study protocol for a stepped-wedge implementation study investigating the intersectoral collaboration of implementing the TREAT INTERACT intervention for primary school teachers and the mhGAP for health care workers for child mental health promotion in Uganda

09-07-2024 - National Library of Medicine

BACKGROUND: Mental and neuropsychological disorders make up approximately 14% of the total health burden globally, with 80% of the affected living in low- and middle-income countries (LMICs) of whom 90% cannot access mental health services. The main objective of the TREAT INTERACT study is to adapt, implement, and evaluate the impact of a novel, intersectoral approach to prevent, identify, ... [Read more...](#)

67. The roles of dating and victimization on adverse mental health among teens: Survey findings during the COVID-19 pandemic

08-07-2024 - National Library of Medicine

CONCLUSIONS: Dating violence plays a critical role in the interconnectedness of victimizations, and the number of victimizations has a cumulative effect on teen mental health. The high prevalence of youth victimizations during the time when in-person interactions were limited suggests that victimizations may transfer from in-person forms to virtual forms and occur offline. [Read more...](#)

68. Quinic acid alleviates high-fat diet-induced neuroinflammation by inhibiting DR3/IKK/NF- κ B signaling via gut microbial tryptophan metabolites

07-07-2024 - National Library of Medicine

With the increasing of aging population and the consumption of high-fat diets (HFD), the incidence of Alzheimer's disease (AD) has skyrocketed. Natural antioxidants show promising potential in the prevention of AD, as oxidative stress and neuroinflammation are two hallmarks of AD pathogenesis. Here, we showed that quinic acid (QA), a polyphenol derived from millet, ... [Read more...](#)

69. Changes in complacency to adherence to COVID-19 preventive behavioral measures and mental health after COVID-19 vaccination among medical and dental healthcare professionals

07-07-2024 - National Library of Medicine

Medical and dental professionals should continue to adhere to preventive measures after COVID-19 vaccination due to their increased risk of exposure to the virus, particularly as new variants emerge that may heighten their risk perception and susceptibility. Therefore, this study aimed to

explore the effects of COVID-19 vaccination on complacency to adherence to COVID-19 preventive behavioral ... [Read more...](#)

70. Vigour as a marker of positive mental health among social media respondents

07-07-2024 - National Library of Medicine

CONCLUSIONS: Vigour may now be measured clinically as an indication of positive mental health and well-being. It may also be further investigated for its relations to other parameters of health, personality, and the efficacy of professional and self-enhancing interventions that aim for the cultivation of vigour. [Read more...](#)

71. The impact of financial stress on student wellbeing in Lebanese higher education

06-07-2024 - National Library of Medicine

CONCLUSIONS: A significant impact of financial stress on college students in Lebanon was obtained, affecting their well-being and mental health aspects. Marital status, gender, academic major, region of living, and financial independence also influences students' experiences. Tailored support and further research are needed to address these multifaceted challenges. [Read more...](#)

72. Addictive behavior and mental health of adolescents aged 11-17 years in Bangladesh in 2014: A cross-sectional study

05-07-2024 - National Library of Medicine

CONCLUSION: Considering the elevated prevalence of reported mental health concerns, identifying vulnerable groups and formulating intervention-oriented policies engaging youths can pave the way towards achieving robust health and well-being for them in Bangladesh. [Read more...](#)

73. The effect of right ventricle septal pacing versus apical pacing in dual-chamber pacemakers on patients' anxiety and depression: a one-year follow-up study

04-07-2024 - National Library of Medicine

CONCLUSIONS: A strong relationship was found between the level of depression and the R.V. site of implantation, as patients with the apical group had higher levels of depression post-implantation. The septal position has less stress and depression on the patient's well-being than the apical one. [Read more...](#)

74. Neurocognitive Disorders: Medical Illness or Mental Disorder: Examining the Mental Health and Wellbeing Act 2022 (Vic) Using Neurocognitive Disorders

04-07-2024 - National Library of Medicine

Victoria has new legislation, the Mental Health and Wellbeing Act 2022 (Vic) (MHWA) to govern the care and treatment of people with mental illness that came into effect on 1 September 2023. It takes a human rights approach with a focus on person-centred care. The definition of mental illness encompasses conditions such as dementia even though it is rarely used to manage such conditions. [Read more...](#)

75. Modifiable predictors of mental health literacy in the educational context: a systematic review and meta-analysis

04-07-2024 - National Library of Medicine

Mental health literacy is vital for well-being in educational settings, extending beyond academics to include social and emotional development. It empowers individuals, allowing them to recognize and address their mental health needs and provide essential support to their peers. Despite the acknowledged importance of modifiable factors, there is a noticeable research gap in those amenable to ... [Read more...](#)

76. Screen exposure, mental health and emotional well-being in the adolescent population: is it time for governments to take action?

04-07-2024 - National Library of Medicine

During the last decade, a multitude of epidemiological studies with different designs have been published assessing the association between the use of digital media and psychological well-being, including the incidence of mental disorders and suicidal behaviours. Particularly, available research has very often focused on smartphone use in teenagers, with highly addictive potential, ... [Read more...](#)

77. Religious Differences in Physical and Mental Health among Israeli Jews: Findings from the Global Flourishing Study

04-07-2024 - National Library of Medicine

Numerous studies have identified religious correlates of health indicators, but relatively few have been conducted among Jewish populations in Israel or the diaspora. This study investigates the possibility of a religious gradient in physical and mental health and well-being across the familiar categories of Jewish religious identity and observance in Israel: hiloni (secular), ... 78. Predictors of the sustainability for an evidence-based eating disorder prevention program delivered by college peer educators

04-07-2024 - BioMed Central

Despite ongoing efforts to introduce evidence-based interventions (EBIs) into mental health care settings, little research has focused on the sustainability of EBIs in these settings. College campuses are a na... [Read more...](#)

79. Co-occurrence of problematic facebook and video game use: prevalence and association with mental health disorders among adolescents

03-07-2024 - National Library of Medicine

CONCLUSION: Our study found that Problematic Facebook and Video Game Use were prevalent among Tunisian adolescents. The co-occurrence of these disorders is strongly linked to male gender, problematic internet use, depression, and anxiety disorders. These findings underscore the urgency of implementing tailored and effective awareness and prevention programs to address these emerging challenges. [Read more...](#)

80. Mental health outcomes of offspring exposed to parental intimate partner violence in Rwanda

03-07-2024 - National Library of Medicine

CONCLUSION: The study indicates that parental intimate partner violence (IPV) has an impact on the mental well-being of their offspring. Furthermore, it was observed that there is not only a correlation between IPV and poor mental health outcomes, but also a connection between different mental conditions, implying that children exposed to IPV are more prone to experiencing a range of mental ... 81. A holistic lifestyle mobile health intervention for the prevention of type 2 diabetes and common mental disorders in Asian women with a history of gestational diabetes: a randomised control trial with 3-year follow-up protocol

03-07-2024 - National Library of Medicine

BACKGROUND: Women with a history of gestational diabetes mellitus (GDM) are 12-fold more likely to develop type 2 diabetes (T2D) 4-6 years after delivery than women without GDM. Similarly, GDM is associated with the development of common mental disorders (CMDs) (e.g. anxiety and depression). Evidence shows that holistic lifestyle interventions focusing on physical activity (PA), ... [Read more...](#)

82. Women's mental health during late pregnancy: A survey conducted in Shandong Province, China

03-07-2024 - National Library of Medicine

CONCLUSION: The study highlights high rates of general mental health problems during late pregnancy, with unplanned pregnancy and elevated depression scores as key risk factors. Regular mental health screening and targeted interventions are essential to support women during this critical period and enhance the well-being of both mothers and babies. [Read more...](#)

83. Associations Between Suicidal Behaviour, Attitudes Towards Suicide, and Psychological Distress Among Students in a University in East Malaysia

02-07-2024 - National Library of Medicine

CONCLUSION: The prevalence of suicidal behaviour is high among students in a public university in East Malaysia. Services and education for mental health awareness and screening for early detection and intervention of psychological distress should be provided to university students. Implementation of suicide awareness policies and suicide prevention training is crucial. [Read more...](#)

84. Social prescribing for individuals with mental health problems: An ethnographic study exploring the mechanisms of action through which community groups support psychosocial well-being

02-07-2024 - National Library of Medicine

CONCLUSIONS: It is hoped that the findings of this study can help referring professionals increase their understanding of exactly how such groups support individuals' mental health, thus enhancing referring practices. [Read more...](#)

85. MDDBranchNet: A Deep Learning Model for Detecting Major Depressive Disorder Using ECG Signal

02-07-2024 - National Library of Medicine

Major depressive disorder (MDD) is a chronic mental illness which affects people's well-being and is often detected at a later stage of depression with a likelihood of suicidal ideation. Early detection of MDD is thus necessary to reduce the impact, however, it requires monitoring vitals in daily living conditions. EEG is generally multi-channel and due to difficulty in signal acquisition, ... [Read more...](#)

Ageing and mental health

Ageing and mental health

1. #BeSeen: understanding young peoples views of the motivation and impacts of sharing self-harm imagery online and use of their social media data for research-- a UK participatory arts-led qualitative study

24-07-2024 - BMJ Open

Objectives This study explored the views of young people from diverse backgrounds, with or without a history of self-harm, on the motivation and impacts of sharing self-harm imagery online and the use of their social media data for mental health research. Design Thematic analysis of 27 semi-structured one-to-one interviews. Setting Two workshops were conducted in 2021. [Read more...](#)

2. Golden steps: A nursing approach for vitality, agility, and rumination in geriatric clients with depressive disorders through mindful walking

21-07-2024 - National Library of Medicine

CONCLUSION: This study revealed that geriatric clients with depressive disorders showed more significant improvements in vitality, followed by improvement in rumination and agility. Integrating mindful walking as a part of care plans for those clients would promote their physical activity and mental well-being. [Read more...](#)

3. Is there a relationship of cortisol and sex steroid hormones with mental health in middle-aged adults? the FIT-AGEING study

20-07-2024 - National Library of Medicine

CONCLUSION: In summary, these results suggest that increased levels of steroid hormones - within the normal values - may be associated with better mental health in middle-aged adults. [Read more...](#)

4. Older caregivers' depressive symptomatology over time: evidence from the Survey of Health, Ageing and Retirement in Europe

19-07-2024 - National Library of Medicine

The prevalence of informal caregiving is increasing as populations across the world age. Caregiving has been found to be associated with poor mental health outcomes including depressive symptoms. The purpose of this study is to examine the mean trajectory of depressive symptomatology in older caregivers in a large European sample over an eight-year period, the effects of time-varying and ... 7. The Bridge Between Childhood Trauma and Alexithymia Among Adolescents with Depressive and Bipolar Disorders: A Network Bridge Analysis

16-07-2024 - National Library of Medicine

Childhood trauma and alexithymia are significant risk factors for adolescent mental health issues. Prior research has linked these factors to psychopathology, but the complexities of their interrelation remain underexplored. This study aims to elucidate the relationship between various forms of childhood trauma and alexithymia in adolescents with depressive and bipolar disorders. [Read more...](#)

8. Gay-Straight Alliances, School Functioning, and Mental Health: Associations for Students of Color and LGBTQ Students

15-07-2024 - National Library of Medicine

Utilizing a school-based sample of 895,218 students aged 10-18 years old, we examine differences in students' school functioning, substance use, and mental health in schools with and without Gay-Straight Alliances (GSAs). In addition, we examine whether GSA presence is associated with these outcomes for students of color and LGBTQ students. Overall, students in schools with GSAs were found to ... [Read more...](#)

9. Understanding the factors related to how East and Southeast Asian immigrant youth and families access mental health and substance use services: A scoping review

15-07-2024 - National Library of Medicine

The objective of the review is to identify factors related to how East and Southeast Asian immigrant youth aged 12-24 and their families access mental health and substance use (MHSU) services. To address how East and Southeast Asian youth and their families access mental health and substance use services, a scoping review was conducted to identify studies in these databases: PubMed, ... 11. Abnormality in Peripheral and Brain Iron Contents and the Relationship with Grey Matter Volumes in Major Depressive Disorder

13-07-2024 - National Library of Medicine

Major depressive disorder (MDD) is a prevalent mental illness globally, yet its etiology remains largely elusive. Recent interest in the scientific community has focused on the correlation between the disruption of iron homeostasis and MDD. Prior studies have revealed anomalous levels of iron in both peripheral blood and the brain of MDD patients however, these findings are not consistent. [Read more...](#)

12. The Associations Between Physical Activity and Mental Health Problems in Middle-aged Indonesians

12-07-2024 - National Library of Medicine

CONCLUSIONS: Regular physical activity has been shown to affect mental health positively. Therefore, it is important to improve health education and efforts to raise awareness among middle-aged Indonesians about the importance of physical activity in maintaining good mental health. [Read more...](#)

13. Post-traumatic stress disorder symptoms following exposure to acute psychological trauma in children aged 8-16 years in South Africa: protocol for the Sinethemba longitudinal study

12-07-2024 - BMJ Open

Introduction Children exposed to trauma are vulnerable to developing post-traumatic stress disorder (PTSD) and other adverse mental health outcomes. In low-and middle-income countries (LMICs), children are at increased risk of exposure to severe trauma and co-occurring adversities. However, relative to high-income countries, there is limited evidence of the factors that predict good versus ... [Read more...](#)

14. Self-perceptions of aging, physical activity, and depressive symptoms in older community residents with varied neighborhood walkability in Taiwan

11-07-2024 - National Library of Medicine

CONCLUSIONS: This study emphasizes key areas on intervention programs and policy formulation to promote mental health in older adults. [Read more...](#)

15. Comparative effects of lifelong moderate-intensity continuous training and high-intensity interval training on blood lipid levels and mental well-being in naturally ageing mice

11-07-2024 - National Library of Medicine

CONCLUSION: Lifelong exercise, whether moderate-intensity continuous or high-intensity interval training, can preserve body health during ageing, prevent anxiety and depression, and maintain stable blood lipid levels. Both exercise types are equally effective, suggesting that exercise intensity may not be the critical factor underlying these beneficial adaptations. [Read more...](#)

16. Residential Proximity to Oil and Gas Development and Mental Health in a North American Preconception Cohort Study: 2013-2023

11-07-2024 - National Library of Medicine

Objectives. To evaluate associations between oil and gas development (OGD) and mental health using cross-sectional data from a preconception cohort study, Pregnancy Study Online. Methods. We analyzed baseline data from a prospective cohort of US and Canadian women aged 21 to 45 years who were attempting conception without fertility treatment (2013-2023). We developed residential proximity ... [Read more...](#)

17. The association of the Prime Diet Quality Score (PDQS) with depression and anxiety symptoms: the Isfahan functional disorders (ISFUN) cohort study

10-07-2024 - National Library of Medicine

Background: Due to scarce epidemiologic data regarding the Prime Diet Quality Score (PDQS) and mental health disorders, this study aimed to investigate the association of PDQS with depression and anxiety symptoms in Iranian adults. Methods: This cross-sectional analysis was performed using the baseline data collected for the Isfahan functional disorders (ISFUN) cohort study. [Read more...](#)

18. Severe Mental Illness as a risk factor for recorded diagnosis of osteoporosis and fragility fractures in people aged 50 and above: retrospective cohort study using UK primary care data

10-07-2024 - National Library of Medicine

CONCLUSION: SMI is associated with increased likelihood of fragility fractures and osteoporosis underdiagnosis. Interventions should be considered to mitigate the increased risk of fractures in people with SMI. [Read more...](#)

19. Twenty-year changes of adolescent mental health and substance use: a Finnish population-based time-trend study

10-07-2024 - National Library of Medicine

This time-trend study assesses changes in mental health and substance use among Finnish adolescents from 1998 to 2018. Representative samples of adolescents (N = 6,600) aged 13-16 years participated in school-based, almost identical cross-sectional studies in 1998 (n = 1,446), 2008 (n = 2,009), 2014 (n = 1,800) and 2018 (n = 1,345), respectively. The Strengths and Difficulties Questionnaire ... [Read more...](#)

20. Improvements in mental health associated with increased electronic communication and deterioration in physical health in adults aged 50+ during the COVID-19 pandemic

08-07-2024 - National Library of Medicine

CONCLUSION: Future policies should thus consider the positive impact of electronic contacts on mental health to promote overall health in adults aged 50 and older. [Read more...](#)

21. Early Changes in Nutritional Status of Elderly Patients with Lung Cancer Undergoing Chemotherapy Are Positively Related with Symptoms of Depression: A Prospective Follow-Up Study

08-07-2024 - National Library of Medicine

This study aims to assess early effects of chemotherapy on symptom alleviation, nutritional status, and mental health in elderly patients with advanced non-small-cell lung cancer (NSCLC). This prospective study included 45 NSCLC patients (32 males, 13 females) aged 65-82 years (mean age 70.0 ± 4.5 years) with good performance status. Assessments were conducted immediately after diagnosis and ... [Read more...](#)

22. Health Outcomes around Pregnancy and Exposure to HIV/Antiretrovirals (HOPE) study protocol: a prospective observational cohort study of reproductive-aged women living with HIV

05-07-2024 - BMJ Open

Introduction Over 265 000 women are living with HIV in the USA, but limited research has investigated the physical, mental and behavioural health outcomes among women living with HIV of reproductive age. Health status during the reproductive years before, during and after pregnancy affects pregnancy outcomes and long-term health. Understanding health outcomes among women living with HIV of ... 23. Predictors of treatment outcome of psychological therapies for common mental health problems (CMHP) in older adults: A systematic literature review

05-07-2024 - National Library of Medicine

Identifying factors that impact psychological treatment outcomes in older people with common mental health problems (CMHP) has important implications for supporting healthier and longer lives. The aim of the present study was to synthesise the evidence on predictors of psychological treatment outcomes in older people (aged 65+). PubMed, Scopus, Web of Science and PsycINFO were searched and ... [Read more...](#)

24. Associations between mental health symptoms, trauma, quality of life and coping in adults living in Ukraine: A cross-sectional study a year after the 2022 Russian invasion

05-07-2024 - National Library of Medicine

We aimed to assess the mental health of adults living in Ukraine one year after onset of the Russo-Ukrainian war, along with quality of life and coping strategies. Quota sampling was used to collect online survey data from 2364 adults aged 18-79 years living in Ukraine from April 5, 2023 to May 15, 2023. Among adults living in Ukraine, 14.4 % had probable post-traumatic stress disorder (PTSD), ... [Read more...](#)

31. Regional trends in mental health inequalities in young people aged 16-25 in the UK and the role of cuts to local government expenditure: Repeated cross-sectional analysis using the British household panel Survey/UK household longitudinal survey

02-07-2024 - National Library of Medicine

Young people's mental health globally has been in decline. Because of their low perceived need, young people's services tend to be the first cut when budgets are reduced. There is a lack of evidence on how a reduction in services and opportunities for young people is associated with their mental health. Additionally, how this may be magnified by place and the assets and challenges of place. [Read more...](#)

32. Assessing the efficacy of a brief universal family skills programme on child behaviour and family functioning in Gilgit-Baltistan, Pakistan: protocol for a feasibility randomised controlled trial of the Strong Families programme

01-07-2024 - *BMJ Open*

Purpose The global burden of mental health difficulties among children underscores the importance of early prevention. This study aims to assess the efficacy, feasibility and acceptability of the Strong Families programme in enhancing child behaviour and family functioning in low-resource settings in Gilgit-Baltistan, Pakistan. **Methods and analysis** This is a two-arm, ... 15. Early treatment for children with mental health problems and genetic conditions through a parenting intervention (The GAP): study protocol for a pragmatic randomized controlled trial

20-07-2024 - National Library of Medicine

BACKGROUND: Children with genetic conditions are at increased risk for mental health and neurodevelopmental problems, often accompanied by significant parental distress. Genetic and family factors can impact children and parents' mental health. Early parenting interventions, like the Incredible Years® programs, have demonstrated to improve parental distress and children's mental health. [Read more...](#)

16. The impact of the first phase of the COVID-19 pandemic on referral patterns and therapeutic service provision for children and young people's psychosocial distress in a Low-or Middle-Income Country: A service evaluation of routinely collected data from a non-government organisation operating in schools in the Western Cape, South Africa

19-07-2024 - National Library of Medicine

INTRODUCTION: In low- and middle-income countries (LMICs), including South Africa, there is a paucity of psychosocial support services. Therefore, services are often provided in schools by non-government organisations like Community Keepers (CK). The COVID-19 pandemic and resultant restrictions meant that children and young people's (CYP) lives changed, negatively affecting their mental health. [Read more...](#)

17. Nurture clinic: Promoting mental health of children and adolescents

13-07-2024 - National Library of Medicine

PURPOSE: Although previous studies have examined the association between youth psychosocial risks and their perceptions of their neighborhood, it is unclear how objective neighborhood characteristics are associated with psychosocial risks and mental health symptoms

among adolescents. We investigated how neighborhood characteristics moderate the relationship between youth psychosocial ... [Read more...](#)

58. Parental Neglect and Childhood Obesity Amidst COVID-19: A Developmental Psychopathology Perspective on Health and Developmental Risks

13-07-2024 - National Library of Medicine

The COVID-19 pandemic has profoundly impacted the mental health and developmental trajectories of children and adolescents, catalyzing a range of psychological and behavioral issues due to enforced lockdowns and other restrictions. This text explores these impacts through the lens of developmental psychopathology, which integrates clinical psychology and developmental science to examine the ... [Read more...](#)

59. Adolescent Mental Health and Suicidal Behaviors in the Context of Expanded Supplemental Nutrition Assistance Program Eligibility

13-07-2024 - National Library of Medicine

PURPOSE: Food insecurity is a risk factor for poor mental health and suicidal behaviors among adolescents. Prior research shows that states with policies that expand Supplemental Nutrition Assistance Program (SNAP) eligibility have a lower prevalence of food insecurity. The primary aim of this study was to compare the prevalence of feelings of sadness or hopelessness, suicidal ideation, ... [Read more...](#)

60. Mental Health, Climate Change, and Bodily Autonomy: An Analysis of Adolescent Health Policy in the Post-Pandemic Climate

13-07-2024 - National Library of Medicine

The COVID-19 pandemic exacerbated the vulnerability of adolescents and young adults (AYAs) who face economic disadvantage, depend on social safety net resources, have politically targeted identities, are geopolitically displaced, and/or are racially or ethnically marginalized. A rapid change in social safety net policies has impacts that reverberate throughout interrelated domains of AYA ... [Read more...](#)

61. School modality, race and ethnicity, and mental health of U.S. adolescents during the COVID-19 pandemic

13-07-2024 - National Library of Medicine

CONCLUSIONS: Fully online learning may have benefitted the mental health of Black adolescents during the COVID-19 pandemic, perhaps because it buffered racial discrimination and social anxiety in schools. Additional interventions should be explored to promote in-person school environments that better support the mental health of Black adolescents. Moreover, prioritizing equitable access to ... 62. Screen Media Use and Mental Health of Children and Adolescents: A Secondary Analysis of a Randomized Clinical Trial

12-07-2024 - National Library of Medicine

CONCLUSIONS AND RELEVANCE: This secondary analysis of a randomized clinical trial found that a short-term reduction in leisure-time screen media use within families positively affected psychological symptoms of children and adolescents, particularly by mitigating internalizing behavioral issues and enhancing prosocial behavior. More research is needed to confirm whether these effects are ... [Read more...](#)

63. Childhood intra- and extra-familial maltreatment and later-life trajectories of depressive symptoms: evidence from China

12-07-2024 - National Library of Medicine

CONCLUSIONS: Findings in this study suggest that childhood maltreatment is not only associated with later-life poorer mental health but contributes to increasing inequalities in mental health as people age, especially among peer-bullying victims and women. [Read more...](#)

39. Change in cardiorespiratory fitness and risk of depression, anxiety, and cerebrovascular disease

20-07-2024 - National Library of Medicine

CONCLUSIONS: The findings indicate that there is a longitudinal association between negative change in estCRF and increased risk of depression, anxiety, and cerebrovascular disease later in life. Decreasing levels of estCRF could be a helpful indicator when identifying these disorders at a population level. [Read more...](#)

40. Gray matter volume alterations in de novo Parkinson's disease: A mediational role in the interplay between sleep quality and anxiety

20-07-2024 - National Library of Medicine

CONCLUSION: This study has shed further light on the relationship between sleep disturbances and anxiety symptoms in PD patients. Given the pivotal roles of the FG and the ITG in facial recognition and the recognition of emotion-related facial expressions, our findings indicate that compromised sleep quality, under the pathological conditions of PD, may exacerbate the reduction in GMV within ... 41. The association of early life factors with depression and anxiety in adults aged 40-69 years: a population-based cohort study

20-07-2024 - National Library of Medicine

This study was aimed to explore the longitudinal association of five early life factors (breastfeeding, maternal smoking around birth, birth weight, being born in a multiple birth, and adoption) during the in-utero, perinatal, and early childhood development stages with incidence of depression and anxiety in adults aged 40-69 years. We used data from the UK biobank, 5,02, ... [Read more...](#)

42. Effects of mindfulness-based stress reduction on quality of life of breast cancer patient: A systematic review and meta-analysis

19-07-2024 - Public Library of Science (PLoS)

by Xiaohui Wang, Zhicheng Dai, Xinying Zhu, Yu Li, Limin Ma, Xinghui Cui, Tongxia Zhan
Background Breast cancer is the most common malignancy that occurs in women. Due to the pain caused by the disease itself and the adverse reactions in the treatment process, breast cancer patients are prone to anxiety, depression, fear of recurrence, and other negative emotions, ... 43. Evaluation of burnout levels among healthcare staff in anesthesiology departments in Greece - Is there a connection with anxiety and depression?

19-07-2024 - National Library of Medicine

CONCLUSIONS: As physicians and nurses working in anesthesiology departments have stressful jobs and work long hours, it is important to further study their physical, emotional, and mental exhaustion as well as psychological resilience levels. [Read more...](#)

44. Elevated level of prenatal testosterone and vitamin D3 deficiency during pregnancy, in the presence of prenatal maternal stress, and their association with the development of attention deficit hyperactivity disorder (ADHD)-like symptoms in toddlers

19-07-2024 - National Library of Medicine

CONCLUSIONS: The study supported the hypothesis that prenatal maternal stress, increased level of prenatal testosterone, and low level of vitamin D3 during pregnancy increases the risk of development of ADHD-like symptoms in toddlers (< 2 years old). Also, the obtained results support the hypothesis that the influence of prenatal factors causes ADHD-like symptoms in offspring through a ... [Read more...](#)

45. Cannabidiol in anxiety disorders: Current and future perspectives

19-07-2024 - National Library of Medicine

Anxiety disorders are highly prevalent psychiatric disorders, characterized by a chronic course and often accompanied by comorbid symptoms that impair functionality and decrease quality of life. Despite advances in basic and clinical research in our understanding of these disorders, currently available pharmacological options are associated with limited clinical benefits and side effects that ... 46. Investigating adverse daily life effects following a psychosocial laboratory stress task, and the moderating role of Psychopathology

19-07-2024 - National Library of Medicine

Laboratory stress tasks are necessary to closely investigate the stress response in a controlled environment. However, to our knowledge, no study has tested whether participating in such tasks can pose any daily life adverse effect. Fifty-three healthy participants (46 women) took part in a laboratory session where stress was induced using a typical psychosocial stressor: the repeated ... [Read more...](#)

47. An evaluation of digital intervention for perinatal depression and anxiety: A systematic review

19-07-2024 - National Library of Medicine

Digital intervention has been shown to be helpful in improving perinatal mental health. However, the design characteristics of such interventions have not been systematically reviewed. Considering that a lack of support-especially from a partner-is one of the major contributing factors to perinatal depression and anxiety, it is crucial to determine whether digital interventions have included ... 48. Borderline personality features in relationship to childhood trauma in unipolar depressive and bipolar disorders

19-07-2024 - National Library of Medicine

CONCLUSION: Given the high prevalence of childhood trauma and borderline personality features, screening for these factors in individuals with mood disorders is crucial. Identifying these elements can inform and enhance the management of the often fluctuating and complex nature of these comorbid conditions, leading to more effective and tailored treatment strategies. [Read more...](#)

49. Translated and culturally adapted internet-delivered cognitive therapy for social anxiety disorder in Japanese clinical settings: study protocol for a randomised controlled trial

19-07-2024 - National Library of Medicine

BACKGROUND: Cognitive therapy for social anxiety disorder (CT-SAD) has extensive empirical support and is recommended in several national guidelines. However, ensuring access to evidence-based psychological therapies such as CT-SAD remains a global challenge. An internet-delivered version of this treatment protocol (iCT-SAD) has recently been developed in the UK as a way to overcome this ... [Read more...](#)

50. Evaluation of the association of physical activity levels with self-perceived health, depression, and anxiety in Spanish individuals with high cholesterol levels: a retrospective cross-sectional study

19-07-2024 - National Library of Medicine

CONCLUSION: The physically inactive people had a higher risk of negative SPH, depression and anxiety. Regular PA may improve SPH and mental health in people with high cholesterol, but more studies are needed to establish causal relationships, mechanisms, and optimal doses. [Read more...](#)

51. Effects of the Internet-based rehabilitation information sharing program on psychological stress of family caregivers of inpatients: A non-randomized controlled study

19-07-2024 - National Library of Medicine

The psychological impact of Internet-based rehabilitation information provision on family caregivers of inpatients has not yet been investigated. This study investigated the impact of the Internet-based rehabilitation information sharing program on anxiety and depression among family caregivers of inpatients. Participants were patients admitted to a rehabilitation hospital and their families. [Read more...](#)

52. The Association Between Spirituality, Self-Esteem, Anxiety and Depression: A Comparative Exploratory Study Between People with a Spinal Cord Injury and Healthy Subjects in Greece

19-07-2024 - National Library of Medicine

The purpose of this study was to evaluate spirituality, religiosity, self-esteem, depression, and stress in people with spinal cord injuries. The Royal Free Questionnaire for Spiritual and Religious Beliefs, the Rosenberg Self-Esteem Scale, the Center for Epidemiologic Studies Depression Scale, and the Spielberger State-Trait Anxiety Scale were all designed for the current study to collect ... 56. Polypharmacy for perinatal mood and anxiety disorders

18-07-2024 - ClinicalKey (Elsevier)

Lancet Psychiatry, The, Volume 11, Issue 8, 2024 Aug, Pages 575-577 | Viguera, Adele CA substantial proportion of people receiving treatment for mood and anxiety disorders during pregnancy are prescribed multiple psychotropic medications. In clinical practice, polypharmacy during pregnancy (defined as the use of more than one psych... [Read more...](#)

57. Evaluation of Depression, Self-esteem, Anxiety, and Dermatological Quality of Life Index in Adolescent Acne Patients: A Case-Control Study

18-07-2024 - National Library of Medicine

CONCLUSION: The study shows that acne vulgaris has a significant impact on the depression, anxiety, and self-esteem levels of adolescent patients. Dermatologists should pay attention to the psychological well-being of patients and provide psychiatric evaluation if necessary. [Read more...](#)

58. The chronic unpredictable mild stress (CUMS) Paradigm: Bridging the gap in depression research from bench to bedside

18-07-2024 - National Library of Medicine

Depression is a complicated neuropsychiatric condition with an incompletely understood etiology, making the discovery of effective therapies challenging. Animal models have been crucial in improving our understanding of depression and enabling antidepressant medication development. The CUMS model has significant face validity since it induces fundamental depression symptoms in humans, ... [Read more...](#)

59. Web-based interpretation bias training to reduce anxiety: A sequential, multiple-assignment randomized trial

18-07-2024 - National Library of Medicine

CONCLUSIONS: Web-based CBM-I appears effective, but supplemental coaching may not mitigate the challenge of dropout. (PsyInfo Database Record (c) 2024 APA, all rights reserved). [Read more...](#)

60. Association between number of confidants and adolescent anxiety/depression: a school-based study

18-07-2024 - National Library of Medicine

CONCLUSIONS: Adolescents who had no or few confidants had more anxiety/depressive symptoms. Attention needs to be paid to better identify these adolescents, and avenues to support them need to be established. [Read more...](#)

61. Parental education and children's depression, anxiety, and ADHD traits, a within-family study in MoBa

18-07-2024 - National Library of Medicine

Children born to parents with fewer years of education are more likely to have depression, anxiety, and attention-deficit hyperactivity disorder (ADHD), but it is unclear to what extent these associations are causal. We estimated the effect of parents' educational attainment on children's depressive, anxiety, and ADHD traits at age 8 years, in a sample of 40, ... [Read more...](#)

62. A network analysis of the interrelationships between depression, anxiety, insomnia and quality of life among fire service recruits

18-07-2024 - National Library of Medicine

CONCLUSION: Depression and anxiety were important mental health issues to address among fire service recruits in the post-COVID-19 era in China. Targeting central and bridge symptoms identified in network analysis could help address depression and anxiety among fire service recruits in the post-COVID-19 era. [Read more...](#)

63. Association between personality traits and symptoms of depression and anxiety via emotional regulation and distress tolerance

18-07-2024 - National Library of Medicine

The Big Five personality traits have shown associations with symptoms of depression and anxiety among college students, but it is unclear which factors mediate these relationships. Past research suggests that psychological distress is closely related to difficulties in affect regulation (e.g., low distress tolerance). Therefore, the present study examined the associations between personality ... [Read more...](#)

64. Temporal dynamics of socioeconomic inequalities in depressive and anxiety symptoms during the COVID-19 pandemic: a scoping review

18-07-2024 - National Library of Medicine

CONCLUSION: Overall, to the detriment of those with lower socioeconomic status, mental-health inequalities persisted or increased in most analyses. Continually monitoring socioeconomic inequalities over time is crucial, since this makes it possible to adapt prevention and intervention strategies to specific pandemic phases. Interventions targeting job security, ... [Read more...](#)

65. Curative care expenditure of outpatient anxiety disorder in Liaoning Province, 2015-2020-based on "System of Health Accounts 2011"

18-07-2024 - National Library of Medicine

CONCLUSION: Initiatives to improve the essential drug system, reduce the out-of-pocket (OOP) ratio, and strengthen primary health care to effectively reduce the medical burden on patients. [Read more...](#)

66. Longitudinal associations between family functioning and generalized anxiety among adolescents: the mediating role of self-identity and cognitive flexibility

18-07-2024 - National Library of Medicine

CONCLUSION: Findings indicated that family functioning can be a protective factor of GA, and self-identity and cognitive flexibility act as a crucial role in the association between family functioning and GA. Future studies should adopt more time points and long-term follow-up assessments using more robust approaches to improve the reliability of the study findings. [Read more...](#)

67. The Maintenance Model of Restrictive Practices: A Trauma-Informed, Integrated Model to Explain Repeated Use of Restrictive Practices in Mental Health Care Settings

18-07-2024 - National Library of Medicine

Nurses are at the forefront of care in mental health services but their role is conflicted they carry the most responsibility for care and also for restrictive practices. The harmful effects of restrictive practices for mental health patients are well documented, have attracted negative media attention, public concern, and criticism directed specifically at nursing staff. [Read more...](#)

Post Traumatic Stress Disorder

Post Traumatic Stress Disorder

1. Impact of cognitive behavioural therapy on neural, inflammatory, & autonomic markers in a sample with PTSD and cardiovascular risk: protocol for a pilot randomised controlled trial

24-07-2024 - National Library of Medicine

Background: Individuals with posttraumatic stress disorder (PTSD) are at heightened risk for cardiovascular disease (CVD) compared to the general population. Inflammation and autonomic dysfunction are candidate mechanisms of CVD risk in PTSD however, these mechanisms have not been well-characterised in the PTSD-CVD link. Further, these mechanisms may operate through altered stress-related ... [Read more...](#)

23-07-2024 - Springer

[Read more...](#)

3. A history of PTSD changes the way people express themselves during the COVID-19 pandemic

22-07-2024 - National Library of Medicine

Background: The words people use in everyday life tell us about their emotions, their mental state and allow us to understand how people process and interpret an event. Previous research has established a link between the content analysis of narrative texts and the psychopathology of people who have experienced trauma. Objectives: This study examines whether the development of PTSD following ... [Read more...](#)

4. Cannabidiol effects on fear processing and implications for PTSD: Evidence from rodent and human studies

19-07-2024 - National Library of Medicine

Cannabidiol (CBD) modulates aversive memory and its extinction, with potential implications for treating anxiety- and stress-related disorders. Here, we summarize and discuss scientific evidence showing that CBD administered after the acquisition (consolidation) and retrieval (reconsolidation) of fear memory attenuates it persistently in rats and mice. CBD also reduces fear expression and ... [Read more...](#)

5. HIV status affects PTSD symptom severity, psychophysiology, and heart rate variability in women with low but not high exposure to childhood maltreatment

18-07-2024 - National Library of Medicine

CONCLUSION: In the current sample of Black women, HIV status was associated with PTSD symptom severity in a manner dependent on level of childhood maltreatment, suggesting that HIV status may be an important factor to consider for behavioral and pharmacological treatment strategies for PTSD. Additionally, HIV status is associated with lower percent potentiation to darkness and lower RSA ... [Read more...](#)

6. Access to best-evidenced mental health support for care-experienced young people: Learnings from the implementation of cognitive therapy for PTSD

16-07-2024 - National Library of Medicine

CONCLUSIONS: Findings offer key considerations for mental health teams, service leads, commissioners and policy-makers to enhance delivery of best-evidenced mental health treatments like CT-PTSD, for CEYP. [Read more...](#)

7. Activation of GPER1 by G1 prevents PTSD-like behaviors in mice: Illustrating the mechanisms from BDNF/TrkB to mitochondria and synaptic connection

12-07-2024 - National Library of Medicine

CONCLUSION: G1 improved PTSD-like behaviors in SPS mice, possibly by increasing hippocampal GPER1 expression and promoting BDNF/TrkB signaling to repair synaptic and mitochondrial functional impairments. This study would provide critical mechanism for the prevention and treatment of PTSD. [Read more...](#)

8. Lifespan of Splints in a Sample of German Soldiers Hospitalised with Post-traumatic Stress Disorder (PTSD) in Combination with Sleep Bruxism and Painful Temporomandibular Disorder (TMD)

12-07-2024 - National Library of Medicine

CONCLUSION: The presented data shows that therapeutic pain reduction remained valid in the long term despite continued PTSD. The lifespan of a splint seems to be dependent on individual factors. Long-term splint therapy appears to be accepted by the majority of patients with PTSD and painful TMD. [Read more...](#)

9. Why Do Veterans Not Respond as Well as Civilians to Trauma-Focused Therapies for PTSD?

11-07-2024 - National Library of Medicine

This column first reviews evidence that veterans have poorer response to trauma-focused therapies for PTSD compared to civilians. We then consider several explanations for this trend, starting with gender as a possible confounding variable. We also examine other hypotheses, including the effects of the military acculturation process, the unique influences of military traumas, ... [Read more...](#)

10. Self-stigma mediates the relationships between childhood maltreatment and symptom levels of PTSD, depression, and anxiety

10-07-2024 - National Library of Medicine

Background: Childhood maltreatment is a risk factor for developing multiple forms of psychopathology, including depression, posttraumatic stress disorder (PTSD), and anxiety. Yet, the mechanisms linking childhood maltreatment and these psychopathologies remain less clear. Objective: Here we examined whether self-stigma, the internalization of negative stereotypes about one's experiences, ... [Read more...](#)

11. Psychological distress mediates the association between COVID-19-related discrimination and subsequent PTSD symptom severity in healthcare workers: a two-year follow-up study

09-07-2024 - National Library of Medicine

CONCLUSIONS: COVID-19-related discrimination is associated with subsequent PTSD symptom severity in healthcare workers. Psychological distress may serve as an important mediator, underscoring the potential need for interventions targeting this factor. [Read more...](#)

12. A retrospective chart review to assess the impact of alpha-guided transcranial magnetic stimulation on symptoms of PTSD and depression in active-duty special operations service members

08-07-2024 - National Library of Medicine

CONCLUSION: This data provides preliminary support for safe application of α -rTMS for symptom reduction in active-duty special operations military personnel. [Read more...](#)

13. Blunted brachial blood flow velocity response to acute mental stress in PTSD females

05-07-2024 - National Library of Medicine

Post-traumatic stress disorder (PTSD) is associated with increased cardiovascular disease (CVD) risk. Compared with males, females are twice as likely to develop PTSD after trauma exposure, and cardiovascular reactivity to stress is a known risk factor for CVD. We aimed to examine hemodynamic responses to acute mental stress in trauma-exposed females with and without a clinical diagnosis of PTSD. [Read more...](#)

14. Subjective cognitive concerns, APOE ϵ 4, PTSD symptoms, and risk for dementia among older veterans

02-07-2024 - National Library of Medicine

CONCLUSIONS: The findings underscore the value of SCC as an indicator of ADRD risk in Veterans 65 and older when considered in conjunction with other influential genetic, clinical, and demographic risk factors. [Read more...](#)

15. The effect of a single session of psychological first aid in the emergency department on PTSD and depressive symptoms three months post-intervention: results of a randomised controlled trial

01-07-2024 - National Library of Medicine

Background: Despite its popularity, evidence of the effectiveness of Psychological First Aid (PFA) is scarce. Objective: To assess whether PFA, compared to psychoeducation (PsyEd), an attention placebo control, reduces PTSD and depressive symptoms three months post-intervention. Methods: In two emergency departments, 166 recent-trauma adult survivors were randomised to a single session of PFA ... [Read more...](#)

Psychosis

Psychosis

1. Interaction between visual impairment and genetic risk of dementia and psychosis in older adults

26-07-2024 - National Library of Medicine

CONCLUSIONS: The association between VI and neuropsychiatric outcomes is not explained by shared genetic risk factors, and there is a significant interaction between VI and polygenic risk of hallucinations in older adults. [Read more...](#)

2. Timeframe for Conversion to Psychosis From Individuals at Clinical High-Risk: A Quantile Regression

26-07-2024 - National Library of Medicine

CONCLUSIONS: This study underscores the pivotal role of functional characteristics in shaping TCP among individuals with CHR, emphasizing the necessity for a comprehensive consideration of temporal aspects in early prevention efforts. [Read more...](#)

3. Do Cognitive Subtypes Exist in People at Clinical High Risk for Psychosis? Results From the EU-GEI Study

25-07-2024 - National Library of Medicine

CONCLUSIONS: Stratifying patients according to cognitive performance has the potential to inform clinical care. However, we did not find evidence of cognitive clusters in this CHR-P sample. We suggest that care needs to be taken in inferring the existence of distinct cognitive subtypes from unsupervised learning studies. Future research in CHR-P samples could explore the existence of ... [Read more...](#)

4. Late 'Early Intervention in Psychosis': A Family School for Learning How to Live with Schizophrenia

24-07-2024 - National Library of Medicine

The paper describes a family school for learning how to live with schizophrenia, which was founded in 1986 in Vienna, Austria, and is still running today. It was established in cooperation between professionals and the Austrian self-help association HPE of the relatives of persons with mental disorders. It addresses the needs of 10 families at a time, in cases where a son or a daughter was ... [Read more...](#)

5. The Effect of Untreated Illness in Youth Depression: A Cross-Sectional Study

24-07-2024 - National Library of Medicine

CONCLUSION: The study showed that DUI has an impact on the reduction of depressive, negative symptoms and symptoms of disorganization in youth patients at the first depressive episode. A high level of comorbidity has been uncovered, confirming that a variety of non-psychotic and psychotic disorders in youth manifest themselves in depression at a prodromal stage, ... 13. Factors associated with the psychosis continuum among homeless people: Comparison between natives and migrants in the SAMENTA study

23-07-2024 - National Library of Medicine

CONCLUSION: Differences were found in the factors associated with the psychosis continuum by migrant status, they highlight the impact of experiences related to migration. Prospective studies are needed to better understand these underlying pathways. [Read more...](#)

14. Parkinson's disease psychosis associated with accelerated multidomain cognitive decline

23-07-2024 - National Library of Medicine

CONCLUSIONS: Patients with PD psychosis exhibited decline in semantic aspects of language, processing speed, global cognition, visuospatial abilities and memory, regardless of sociodemographic characteristics, neuropsychiatric and motor symptoms. These cognitive domains, particularly semantic aspects of language may therefore play an important role in PD psychosis and warrant further ... [Read more...](#)

15. Clinical high risk for psychosis and service disengagement: Incidence and predictors across 2 years of follow-up

22-07-2024 - National Library of Medicine

BACK: Service disengagement is common in subjects at CHR-P (clinical high risk for psychosis), potentially worsening daily functioning and increasing the duration of untreated psychosis. That is why to identify baseline predictors of service disengagement could help better tailoring follow-up on every CHR-P individual. [Read more...](#)

16. An Introduction to the Human Connectome Project for Early Psychosis

22-07-2024 - National Library of Medicine

CONCLUSIONS: This paper provides an overview of the specific HCP-EP procedures, assessments, and protocols, as well as a brief characterization of the study participants to make it easier for researchers to use this rich dataset. Although we focus here on discussing and comparing affective and non-affective psychosis groups, the HCP-EP dataset also provides sufficient information for ... [Read more...](#)

17. Trace amine-associated receptor 1 (TAAR1) agonism for psychosis: a living systematic review and meta-analysis of human and non-human data

22-07-2024 - National Library of Medicine

CONCLUSIONS: TAAR1 agonists may be less efficacious than dopamine D (2) receptor antagonists already licensed for schizophrenia. The results are preliminary due to the limited number of drugs examined, lack of longer-term data, publication bias, and assay sensitivity concerns in trials associated with large placebo response. Considering their unique mechanism of action, ... [Read more...](#)

18. Quetiapine, Clozapine, and Pimavanserin Treatment Response in Monogenic Parkinson's Disease Psychosis: A Systematic Review

22-07-2024 - National Library of Medicine

Psychotic symptoms frequently occur in idiopathic Parkinson's disease (PD) and often require treatment with antipsychotic therapy. Most antipsychotics have the potential to worsen the motor symptoms of PD quetiapine, clozapine, and pimavanserin are commonly used for the treatment of idiopathic PD because these medications tend to be comparatively well tolerated. [Read more...](#)

19. Steroid-induced psychosis: a spectrum of neuropsychiatric glucocorticoid side effects

22-07-2024 - National Library of Medicine

Glucocorticoid-induced neuropsychiatric side effects have been known since their initial usage and frequently manifest in clinical settings. Despite this, they remain unpredictable, variable and complex to manage, impacting patient outcomes and the healthcare system. We report a case of

glucocorticoid-induced psychosis after the administration of dexamethasone post-neurosurgical intervention ... [Read more...](#)

20. Effectiveness of Acceptance and Commitment Therapy on Psychotic Severity Among Inpatients With Primary Psychoses: A Randomized Controlled Trial

22-07-2024 - National Library of Medicine

This study investigated the effectiveness of acceptance and commitment therapy (ACT) compared to treatment as usual in managing psychotic symptoms, emotional dysregulation, recovery and psychological flexibility in inpatients with primary psychoses. The Primary outcome assessed the positive and negative syndrome scale, while the secondary outcomes were to assess difficulties in the emotion ... [Read more...](#)

21. Pons connectivity correlates with neurophysiological and clinical signatures of predictive coding in psychosis

22-07-2024 - National Library of Medicine

23. Age of migration and common mental disorders among migrants in early adulthood: a Norwegian registry study

22-07-2024 - BioMed Central

Younger age of migration is associated with higher risk of psychotic disorders but the relationship between age of migration and common mental disorders is less clear. This study investigates the association b... [Read more...](#)

24. "Sustaining the burden". A qualitative study on the emotional impact and social functioning of family caregivers of patients with psychosis

21-07-2024 - National Library of Medicine

Evidence shows that caring for a family member with a psychotic disorder generates a significant emotional impact and repercussions on social functioning. However, this caregiving experience can be influenced by cultural factors. The aim of this study is to explore the experience and perception of a group of family caregivers of patients with psychotic disorders of different durations ... [Read more...](#)

25. Reasons for Discharge in a National Network of Early Psychosis Intervention Programs

20-07-2024 - National Library of Medicine

CONCLUSIONS: Participants were discharged from early psychosis intervention services for diverse reasons, some of which were associated with sociocultural factors. Disengagement is a widespread problem affecting all hubs. [Read more...](#)

26. The influence of age on ECT efficacy in depression, mania, psychotic depression and schizophrenia: A transdiagnostic analysis

20-07-2024 - National Library of Medicine

CONCLUSION: Patients with unipolar or bipolar depression, mania, or schizophrenia, regardless of age, respond favourably to ECT. Other associated factors such as psychomotor and psychotic symptoms, disease severity and number of failed pharmacotherapies should be considered in predicting ECT response. Younger patients with psychotic depression may respond better to ECT. [Read more...](#)

27. How does loneliness interact with positive, negative and depressive symptoms of psychosis? New insights from a longitudinal therapy process study

20-07-2024 - National Library of Medicine

Cross-sectional research suggests an association between loneliness and psychotic symptoms, but the causal direction of this association is still unclear. Even though loneliness has been proposed as a potential treatment target to improve psychotherapy for psychosis, not much is known about its role in the treatment process. In this study, we re-analyzed data from a therapy process study to ... [Read more...](#)

28. Robust Brain Correlates of Cognitive Performance in Psychosis and its Prodrome

20-07-2024 - National Library of Medicine

CONCLUSIONS: This connectome-wide association study identified reproducible links between connectivity and cognition in separate samples of psychosis and at-risk individuals who would later develop psychosis. A carefully selected task and population improves the ability of connectome-wide association studies to identify reliable brain-phenotype relationships. [Read more...](#)

29. Employment, education or training status (NEET) at baseline predicts high-threshold symptomatic remission in first episode psychosis: A cohort study

20-07-2024 - National Library of Medicine

CONCLUSION: NEET may represent an important predictive variable of symptomatic outcomes which requires prospective evaluation. [Read more...](#)

30. Visual contrast sensitivity in clinical high risk and first episode psychosis

20-07-2024 - National Library of Medicine

CONCLUSION: This study supports the hypothesis that there are deficits in visual information processing, particularly in tasks that emphasize the magnocellular pathway, in patients experiencing early psychosis. VCS therefore has the potential to be used as a biomarker in this population. [Read more...](#)

31. Effectiveness of online social networking interventions on social isolation and quality of life of people with psychosis: A systematic review

20-07-2024 - National Library of Medicine

CONCLUSION: Higher quality and longer-term studies did not support effectiveness of current OSN interventions in reducing social isolation or improving quality of life of people with psychosis. These interventions used purpose-built platforms and encouraged OSN between selected individuals, which may explain these outcomes. Future research may explore promoting safe use of mainstream OSN ... [Read more...](#)

32. TimelinePTC: Development of a unified interface for pathways to care collection, visualization, and collaboration in first episode psychosis

19-07-2024 - National Library of Medicine

This paper presents TimelinePTC, a web-based tool developed to improve the collection and analysis of Pathways to Care (PTC) data in first episode psychosis (FEP) research. Accurately measuring the duration of untreated psychosis (DUP) is essential for effective FEP treatment,

requiring detailed understanding of the patient's journey to care. However, traditional PTC data collection methods, ... [Read more...](#)

33. Sex differences in clinical presentation in youth at high risk for psychosis who transition to psychosis

19-07-2024 - National Library of Medicine

Sex differences have been observed in individuals with schizophrenia and for those at clinical high risk (CHR) for psychosis. However, specific differences in CHR individuals who transition to psychosis remain inconsistent and understudied. This study aimed to investigate sex differences in 156 CHR individuals who made the transition to psychosis. A wide range of demographics, ... [Read more...](#)

34. Does relapse cause illness progression in first-episode psychosis? A review

19-07-2024 - National Library of Medicine

CONCLUSION: While the social and psychological consequences of a relapse should not be dismissed, clinicians should demand high-quality evidence about the risks of relapse on long-term outcomes. The conventional notion that relapse leads to treatment non-response or worse long-term outcomes is generally not supported by the highest quality studies. These findings can help clinicians and ... [Read more...](#)

35. Interpersonal consequences of paranoid ideation, negative symptoms and sleep problems in a transdiagnostic sample of individuals with psychosis

19-07-2024 - National Library of Medicine

Paranoid ideation is a transdiagnostic construct that is associated with social impairment and often occurs in psychotic spectrum disorders. Little research has examined how paranoid ideation is related to social behaviors that underlie social impairment and may ultimately lead to social rejection. It is important to consider that negative symptoms and sleep problems also contribute to social ... [Read more...](#)

36. The association of tobacco smoking and metabolite levels in the anterior cingulate cortex of first-episode psychosis patients: A case-control and 6-month follow-up (1)H-MRS study

19-07-2024 - National Library of Medicine

Tobacco smoking is highly prevalent among patients with psychosis and associated with worse clinical outcomes. Neurometabolites, such as glutamate and choline, are both implicated in psychosis and tobacco smoking. However, the specific associations between smoking and neurometabolites have yet to be investigated in patients with psychosis. The current study examines associations of chronic ... 37. Computational analysis of linguistic features in speech samples of first-episode bipolar disorder and psychosis

19-07-2024 - National Library of Medicine

CONCLUSION: Our findings demonstrate that both patient groups showed language abnormalities, which were more severe and widespread in FEP compared to FEBD. Our results suggest that NLP methods reveal transdiagnostic linguistic abnormalities in FEP and FEBD. [Read more...](#)

38. Kufor-Rakeb syndrome-associated psychosis: a novel loss-of-function ATP13A2 variant and response to antipsychotic therapy

18-07-2024 - National Library of Medicine

Biallelic (autosomal recessive) pathogenic variants in ATP13A2 cause a form of juvenile-onset parkinsonism, termed Kufor-Rakeb syndrome. In addition to motor symptoms, a variety of other

neurological and psychiatric symptoms may occur in affected individuals, including supranuclear gaze palsy and cognitive decline. Although psychotic symptoms are often reported, ... [Read more...](#)

39. A mixed-methods study to evaluate the feasibility and preliminary efficacy of delivering the optimal health program (OHP) for youth at clinical high risk (CHR) for psychosis: A study protocol

18-07-2024 - National Library of Medicine

Individuals with clinical high risk (CHR) for psychosis experience significant distress, impaired general functioning and a high lifetime risk of self-harm and attempted suicide. The CHR period is an important phase in an individual's mental health where appropriate interventions may reduce the risk of progression to several negative outcomes, including the development of schizophrenia. [Read more...](#)

40. Neurocognition in adolescents and young adults at clinical high risk for psychosis: Predictive stability for social and role functioning

18-07-2024 - National Library of Medicine

The prodromal phase of schizophrenia provides an optimal opportunity to mitigate the profound functional disability that is often associated with fully expressed psychosis. Considerable evidence supports the importance of neurocognition in the development of interpersonal (social) and academic (role) skills. Further findings from adolescents and young adults at clinical high risk for ... [Read more...](#)

41. The liminal space of first-episode psychosis and its treatment: A qualitative study exploring the experience of young people participating in an antipsychotic dose reduction randomized controlled trial

18-07-2024 - National Library of Medicine

CONCLUSIONS AND IMPLICATIONS FOR PRACTICE: The experience and treatment of FEP involves young people feeling torn between multiple, competing perspectives, demands, and priorities. Participation in an RCT exploring dose reduction provided additional supports contributing to the perception of greater safety to navigate their own experiences of treatment that was appropriate for them. 52. Commentary on Neuropsychiatric Symptom Profile in Alzheimer's Disease and their Relationship with Functional Decline

16-07-2024 - *Elsevier*

Alzheimer's disease (AD) is a neurodegenerative disorder characterized by progressive cognitive and functional decline, leading to loss of independence in AD dementia. Noncognitive

neuropsychiatric symptoms (NPS) such as apathy, agitation and psychotic symptoms are common and known to correlate with a host of negative outcomes including greater functional decline, reviewed by1. [Read more...](#)

53. Art and mentalizing in early intervention psychosis: rationale and therapist insights on a new psychoeducational course

16-07-2024 - National Library of Medicine

In this paper, we explore the rationale for a combined art therapy and mentalization-based treatment (MBT) group course for those experiencing a first episode of psychosis (FEP). We discuss the theoretical background for how art and MBT theory can help us better understand and work with groups of individuals experiencing FEP, particularly focusing on avoidance and insecure attachment styles. [Read more...](#)

54. Novel N100 area reliably captures aberrant sensory processing and is associated with neurocognition in early psychosis

16-07-2024 - National Library of Medicine

CONCLUSION: Among the ERP measures studied, N100 area measures may serve as a reliable biomarker of aberrant sensory processing and neurocognition in early psychosis. [Read more...](#)

55. Emotional intelligence and neurocognition profiles in first-episode psychosis: A two-year follow-up study

16-07-2024 - National Library of Medicine

Emotional intelligence (EI) and neurocognition (NC) impairments are common in first-episode psychosis (FEP), yet their evolution over time remains unclear. This study identified patient profiles in EI and NC performance in FEP. 98 adult FEP patients and 128 healthy controls (HCs) were tested on clinical, functional, EI, and NC variables at baseline and two-year follow-up (FUP). [Read more...](#)

56. Early Onset Psychosis in a Pediatric Oncology Setting: A Case Report

16-07-2024 - National Library of Medicine

Schizophrenia (SCZ) and schizoaffective disorder (SHZ) are psychiatric disorders commonly identified in individuals in their late adolescence or early adulthood. Comorbidities are common, though a concurrent diagnosis of leukemia, one of the most frequently occurring cancers of adolescence, has not yet been described in such cases. This case study outlines the clinical presentation, course, ... [Read more...](#)

57. Association between suicidal ideation, negative symptoms and theory of mind in first episode psychosis

16-07-2024 - National Library of Medicine

CONCLUSION: Patients with FEP and chronic schizophrenia have comparable deficits in theory of mind dimension of social cognition. The severity of negative and depressive symptoms potentially contributes to the increased risk of suicide in FEP. [Read more...](#)

58. Psychosis and help-seeking behaviour-A systematic review of the literature

15-07-2024 - National Library of Medicine

CONCLUSIONS: This is the first systematic review to examine help-seeking behaviour in psychosis. Assertive and culturally sensitive engagement efforts should be targeted towards people with a history of early adversity, poor mental health literacy, limited social support and more severe psychosis. [Read more...](#)

59. Making Sense of Recovery From First Psychosis With Antipsychotic Medication: A Qualitative Phenomenological Study

15-07-2024 - National Library of Medicine

CONCLUSIONS: Our findings show that recovery from psychosis with antipsychotics is an all-encompassing, multi-faceted, and ambivalent experience. The themes found in this research could inspire clinicians to discuss less obvious aspects of the experience of recovering with antipsychotics. Even more so, paying attention to the first-person perspective could lead to a more thorough ... [Read more...](#)

60. Impaired contour object perception in psychosis

15-07-2024 - National Library of Medicine

Contour integration, the process of joining spatially separated elements into a single unified line, has consistently been found to be impaired in schizophrenia. Recent work suggests that this deficit could be associated with psychotic symptomatology, rather than a specific diagnosis such as schizophrenia. Examining a transdiagnostic sample of participants with psychotic psychopathology, ... [Read more...](#)

61. Cognitive Behavioral Psychotherapy as an Add-on in Comprehensive Outpatient Care of Non-affective Psychoses: A Multicenter Randomized-Controlled Effectiveness Trial in a Naturalistic Setting

15-07-2024 - National Library of Medicine

CONCLUSION: The results underline an add-on benefit of CBTp in chronically ill individuals with NAP. Superiority of CBTp was demonstrated in comparison with high-quality comprehensive care and may also be true in different comprehensive care settings. [Read more...](#)

62. External validation of a prognostic model to improve prediction of psychosis in primary care

15-07-2024 - National Library of Medicine

Background Early detection could reduce the duration of untreated psychosis. GPs are a vital part of the psychosis care pathway but find it difficult to detect the early features. An accurate risk prediction tool (P Risk) was developed to detect these. **Aim** The external validation of P Risk. **Methods** A retrospective cohort study using a validation dataset of 1,647, ... 70. Childhood trauma and treatment resistance in first-episode psychosis: Investigating the role of premorbid adjustment and duration of untreated psychosis

11-07-2024 - National Library of Medicine

BACKGROUND: Early identification of treatment non-response in first-episode psychosis (FEP) is essential to outcome. Despite indications that exposure to childhood trauma (CT) can have adverse effects on illness severity, its impact on treatment non-response and the interplay with other pre-treatment characteristics is sparsely investigated. We use a lack of clinical recovery as an early ... [Read more...](#)

71. The influence of complex psychiatric comorbidities on treatment for clinical high-risk for psychosis: A preliminary study

10-07-2024 - National Library of Medicine

CONCLUSION: Individual differences in clinical complexity may predict functional response during the early phases of CHR-P treatment. [Read more...](#)

72. Elevated serum kynurenic acid in individuals with first-episode psychosis and insufficient response to antipsychotics

10-07-2024 - National Library of Medicine

The tryptophan-metabolizing kynurenine pathway (KP) can be activated by enhanced inflammatory responses and has been implicated in the pathophysiology of schizophrenia. However, there is little evidence for KP dysregulation in the early course of psychotic illness. We aimed to investigate the potential immune-mediated hyperactivity of KP in individuals with first-episode psychosis (FEP) and ... [Read more...](#)

73. Qualitative study to explore the perspectives and mental health experiences of first episode psychosis patients and their caregivers in North India

10-07-2024 - National Library of Medicine

CONCLUSION: North Indian patients with FEP lack awareness of symptoms. Therefore, onus for seeking help often falls on their caregivers. Psychoeducation from first contact with services and increasing awareness about psychotic illness within the community might help address lack of awareness about symptoms, mental health services, early signs of relapse, and importance of psychosocial ... 74. Pilot study to test the feasibility and clinical efficacy of a psychosocial care programme for patients with psychosis in low-resource settings

10-07-2024 - National Library of Medicine

CONCLUSION: Home-based intervention is feasible and acceptable in a low-resource setting, with preliminary evidence for effectiveness. These findings need corroboration with randomised controlled trials in early psychosis to ameliorate course of illness. [Read more...](#)

75. Analysis of Spanish-Language News Reports on Schizophrenia and Psychosis

10-07-2024 - National Library of Medicine

CONCLUSIONS: More studies should emphasize the importance of U.S. Spanish-language news outlets offering linguistically and culturally appropriate information on treatment options and where and how to access mental health care. Studies focusing on recovery and treatment for schizophrenia and psychosis are needed to combat public mental health stigma in the Latinx population. [Read more...](#)

76. The association of the persecutory ideation questionnaire with clinically-relevant and other outcomes: the moderating role of confidence

09-07-2024 - National Library of Medicine

One of the most used self-administered instruments to assess persecutory delusions is the Persecutory Ideation Questionnaire (PIQ). Individual differences in PIQ scores are important because they predict the severity of symptoms associated with psychosis-related disorders. The current research demonstrates that PIQ is associated with two new outcomes: Satisfaction with life (Studies 1 and 2) ... [Read more...](#)

77. Predicting Clinical Improvement in Early Psychosis Using Circuit-Based Resting-State Functional Magnetic Resonance Imaging

09-07-2024 - National Library of Medicine

CONCLUSIONS: Overall, these results suggest that resting-state functional magnetic resonance imaging connectivity may serve as a useful biomarker of clinical outcomes in recent-onset psychosis. [Read more...](#)

78. On Seizures and Knives: Perampanel-Induced Psychosis: A Case Report and Literature Review

09-07-2024 - National Library of Medicine

Managing epilepsy in the context of intellectual disability can be complicated as this population is known to have higher rates of drug resistance and sensitivity to side effects of antiseizure medications (ASMs). Perampanel is a novel ASM recently approved as an adjunctive treatment for drug resistant focal seizures. It carries a black-box warning for serious psychiatric and behavioral ... [Read more...](#)

79. "I was able to share more details": The experiences of using a smartphone application to support shared decision making in young people with psychosis

08-07-2024 - National Library of Medicine

CONCLUSION AND IMPLICATIONS FOR PRACTICE: Experiences with the app were double sided. On the one hand, the use of the app supports communication, and conversely, interaction with the app can create limitations and new challenges for communication. There is a need for more research to understand the use of mental health smartphone apps and their role in supporting interactive processes such as ... [Read more...](#)

80. Considerations for working with Asian Americans across the psychosis spectrum following the onset of the COVID-19 pandemic

08-07-2024 - National Library of Medicine

With the rise of anti-Asian racism and discrimination that followed the onset of the COVID-19 pandemic, the need to improve Asian Americans' (AA) connection to and experiences with clinical care is critical. AA at risk for or experiencing psychosis represent a particularly vulnerable subset of a population that already exhibits low service utilization and a multitude of barriers to mental ... 87. Psychosis in Fahr Syndrome: A Case Report

05-07-2024 - National Library of Medicine

Fahr syndrome is a rare neurological disorder characterized by a combination of neurological and psychiatric symptoms. Despite its complexity, there is a significant scarcity of literature addressing the treatment of the psychiatric symptoms of Fahr syndrome. This case report discusses the complexity of management of psychosis in patients with Fahr syndrome emphasizing the delicate balance ... [Read more...](#)

88. Prescription medication use in the 10 years prior to diagnosis of young onset Alzheimer's disease: a nationwide nested case-control study

05-07-2024 - National Library of Medicine

CONCLUSIONS: In this study, medication use in several categories was associated with YOAD. Onset of treatment-requiring psychiatric symptoms such as depression or psychosis in mid-life may serve as potential early indicators of YOAD. [Read more...](#)

89. Clinical characteristics associated with functioning trajectories following admission to a psychiatric institution: A prospective cohort study of individuals with psychosis

05-07-2024 - National Library of Medicine

Psychotic disorders can be severely enabling, and functional recovery is often difficult to achieve. Admission to a psychiatric unit represents a key opportunity to implement strategies that will improve functional outcomes. In the current literature, there is a lack of consensus on which factors influence functional recovery. Therefore, the present longitudinal cohort study aimed to identify ... [Read more...](#)

90. Meaningfulness and attachment: what dreams, psychosis and psychedelic states tell us about our need for connection

05-07-2024 - National Library of Medicine

The human need to find meaning in life and the human need for connection may be two sides of the same coin, a coin forged in the developmental crucible of attachment. Our need for meaningfulness can be traced to our developmental need for connection in the attachment relationship. The free energy principle dictates that in order to resist a natural tendency towards disorder self-organizing ... [Read more...](#)

91. Longitudinal changes in cognitive function in early psychosis: a meta-analysis with the MATRICS consensus cognitive battery (MCCB)

05-07-2024 - National Library of Medicine

CONCLUSION: The magnitude of cognitive improvement for MCCB domains was not significantly different between FEP and healthy controls other than visuospatial learning. This underscores visuospatial learning as a potentially sensitive cognitive marker for early pathologic state changes in psychotic disorders. [Read more...](#)

92. Self-reported suicidal ideation among individuals with first episode psychosis and healthy controls: Findings from the international multicentre EU-GEI study

05-07-2024 - National Library of Medicine

CONCLUSIONS: This study showed that depressive symptoms are an important factor relating to suicidal ideation in individuals with FEP, over and above other clinical, sociodemographic, and developmental factors. This underscores the relevance of screening for suicidal ideation in individuals with FEP, and highlights the need for a better understanding of the diagnostic uncertainty and course ... 9. Cannabidiol: Pharmacodynamics and pharmacokinetic in the context of neuropsychiatric disorders

19-07-2024 - National Library of Medicine

In this chapter we explored the growing interest in cannabinoids, particularly cannabidiol (CBD), over the last two decades due to their potential therapeutic applications in neurodegenerative and psychiatric disorders. CBD, a major non-psychotomimetic compound derived from *Cannabis sativa*, is highlighted as a safer alternative to other cannabinoids like Δ^9 -tetrahydrocannabinol (THC). [Read more...](#)

10. Causality between six psychiatric disorders and digestive tract cancers risk: a two-sample Mendelian randomization study

19-07-2024 - National Library of Medicine

Associations between psychiatric disorders and digestive tract cancers have been proposed. However, the causal link between these factors remains unclear. This study pioneers Mendelian randomization (MR) analysis to explore the genetic link between psychiatric disorders and digestive tract cancers risk. We analysed data on six psychiatric disorders [schizophrenia, bipolar disorder, ... [Read more...](#)

11. Cannabidiol as an antipsychotic drug

19-07-2024 - National Library of Medicine

Cannabidiol (CBD) is a major phytocannabinoid in the *Cannabis sativa* plant. In contrast to Δ^9 -tetrahydrocannabinol (THC), CBD does not produce the typical psychotomimetic effects of the plant. In addition, CBD has attracted increased interest due to its potential therapeutic effects in various psychiatric disorders, including schizophrenia. Several studies have proposed that CBD has ... 12. Soundless voices, silenced selves: are auditory verbal hallucinations in schizophrenia truly perceptual?

18-07-2024 - ClinicalKey (Elsevier)

Lancet Psychiatry, The, Volume 11, Issue 8, 2024 Aug, Pages 658-664 | Humpston, Clara S, PhD Woodward, Todd S, ProfSummaryIn much contemporary psychiatric training and practice, there is a strong emphasis on the audible or perceptual quality and externality of auditory verbal hallucinations in clinical assessments. A typical question during clinical assessment... [Read more...](#)

13. Breaking the cycle: Exploring the relationship of metacognition beliefs, obsessive-compulsive symptoms, and psychosocial performance among individuals diagnosed with schizophrenia

18-07-2024 - National Library of Medicine

CONCLUSION: The study reveals a compelling inverse relationship between higher metacognitive dysfunctional beliefs and lower levels of psychosocial functioning in individuals diagnosed with schizophrenia. It also identifies certain demographic factors, such as younger age, as significant contributors to elevated OCS. Importantly, metacognitive dysfunction emerged as a critical predictor of ... [Read more...](#)

14. Acute Treatment Of Schizophrenia

18-07-2024 - National Library of Medicine

Schizophrenia is one of the most common, most severe and most costly mental illnesses in adults. In the acute phase, sufferers usually experience massive anxiety and a high level of distress due to their altered perception. If the symptoms are severe, psychiatric emergencies can arise. The earliest possible antipsychotic treatment, which is felt to be appropriate by those affected, ... [Read more...](#)

15. Changes in levels of the zinc transporter SLC39A12 in Brodmann's area 44: Effects of sex, suicide, CNS pH and schizophrenia

18-07-2024 - National Library of Medicine

Disturbed CNS zinc homeostasis is suggested as part of the pathophysiology of schizophrenia. Our data, from multiple studies, suggests levels of cortical RNA for the solute carrier family 39 member 12 (SLC39A12), a putative zinc transporter, is higher in people with schizophrenia and is more perturbed in a sub-group of people with the disorder that can be separated because they have very low ... 17. Long-term safety and effectiveness of lurasidone in adolescents and young adults with schizophrenia: pooled post hoc analyses of two 12-month extension studies

18-07-2024 - BioMed Central

The aim of this analysis was to evaluate the long-term safety and effectiveness of lurasidone in the treatment of schizophrenia in adolescents and young adults (13–25). [Read more...](#)

18. Innovative strategies for managing hallucinations by exploring effects of tDCS on source monitoring abilities

17-07-2024 - National Library of Medicine

This randomised, crossover, sham-controlled study explored the neural basis of source-monitoring, a crucial cognitive process implicated in schizophrenia. Left superior temporal gyrus (STG) and dorsolateral prefrontal cortex (DLPFC) were the key focus areas. Thirty participants without neurological or psychological disorders underwent offline sham and active tDCS sessions with specific ... [Read more...](#)

19. Three-Year Outcomes of 6-Month Paliperidone Palmitate in Adults With Schizophrenia: An Open-Label Extension Study of a Randomized Clinical Trial

17-07-2024 - National Library of Medicine

CONCLUSIONS AND RELEVANCE: In a 2-year OLE study of a 1-year RCT, results supported favorable long-term outcomes of PP once every 6 months for up to 3 years in adults with schizophrenia. [Read more...](#)

20. Increased regional activity of a pro-autophagy pathway in schizophrenia as a contributor to sex differences in the disease pathology

17-07-2024 - National Library of Medicine

Based on recent genome-wide association studies, it is theorized that altered regulation of autophagy contributes to the pathophysiology of schizophrenia and bipolar disorder. As activity of autophagy-regulatory pathways is controlled by discrete phosphorylation sites on the relevant proteins, phospho-protein profiling is one of the few approaches available for enabling a quantitative ... 24. Wavelet Transform, Reconstructed Phase Space, and Deep Learning Neural Networks for EEG-Based Schizophrenia Detection

16-07-2024 - National Library of Medicine

This study proposes an innovative expert system that uses exclusively EEG signals to diagnose schizophrenia in its early stages. For diagnosing psychiatric/neurological disorders, electroencephalogram (EEG) testing is considered a financially viable, safe, and reliable alternative. Using the reconstructed phase space (RPS) and the continuous wavelet transform, ... [Read more...](#)

25. Utilization and Perceived Need for Mental Health Services Among Homeless Seniors

16-07-2024 - National Library of Medicine

Homeless seniors confront distinct challenges regarding their mental health needs and service access. This study aims to illuminate the mental health landscape of homeless seniors by examining the prevalence of mental illness, utilization of mental health services, and perceived need for mental health care. The study comprises 177 homeless seniors in New York, NY. Findings indicate 10. [Read more...](#)

26. Neurostructural subgroup in 4291 individuals with schizophrenia identified using the subtype and stage inference algorithm

16-07-2024 - National Library of Medicine

Machine learning can be used to define subtypes of psychiatric conditions based on shared biological foundations of mental disorders. Here we analyzed cross-sectional brain images from 4,222 individuals with schizophrenia and 7038 healthy subjects pooled across 41 international cohorts from the ENIGMA, non-ENIGMA cohorts and public datasets. Using the Subtype and Stage Inference (SuStaln) ... [Read more...](#)

27. Is game-based therapy effective for treating cognitive deficits in adults with schizophrenia? Evidence from a randomized controlled trial

16-07-2024 - National Library of Medicine

Cognitive deficits in schizophrenia are a major contributor to poor functional outcomes and everyday functioning, making them a promising therapeutic target. Recent years have witnessed a dramatic increase in the use of digital interventions, such as game-based therapy, targeting

various domains of cognition to treat mental disorders. Game-based digital interventions have been suggested to ... [Read more...](#)

28. Assessment of socio-demographic characteristics and social status of patients with negative symptoms in schizophrenia at different stages of the disease

15-07-2024 - National Library of Medicine

CONCLUSION: Conclusions: The obtained data can be used to establish diagnostic criteria for patients with negative symptoms in schizophrenia, depending on the dynamics of the disease. [Read more...](#)

29. Diagnosis and treatment depression in schizophrenia

15-07-2024 - National Library of Medicine

Depression is the third most common illness among patients with schizophrenia which negatively affects the course of the disease and significantly contributes to the mortality rate, due to increased suicide. Depression, along with negative symptoms and cognitive deficits, is one of the main factors that significantly decreases the quality of life and the disease prognosis in patients with ... 32. Stability and Validity of Self-Reported Depression and Anxiety in Autistic Youth

13-07-2024 - National Library of Medicine

The aim of this study was to assess test-retest reliability and diagnostic validity of self-report instruments of depression and anxiety in autistic youth. Participants were 55 autistic youth aged 8-17 years presenting with depressive or anxiety symptoms. They were interviewed with the Kiddie Schedule for Affective Disorders and Schizophrenia for School-Age Children (K-SADS-PL) and completed ... [Read more...](#)

33. Genetic components of microdeletion syndromes and their role in determining schizophrenia traits

13-07-2024 - National Library of Medicine

Schizophrenia is a neuropsychiatric disorder characterized by various symptoms such as hallucinations, delusions, and disordered thinking. The etiology of this disease is unknown however, it has been linked to many microdeletion syndromes that are likely to contribute to the

pathology of schizophrenia. In this review we have comprehensively analyzed the role of various microdeletion syndromes, ... [Read more...](#)

34. Immune Dysfunction in Schizophrenia Spectrum Disorders

12-07-2024 - National Library of Medicine

Evidence from epidemiological, clinical, and biological research resulted in the immune hypothesis: the hypothesis that immune system dysfunction is involved in the pathophysiology of schizophrenia spectrum disorders (SSD). The promising implication of this hypothesis is the potential to use existing immunomodulatory treatment for innovative interventions for SSD. [Read more...](#)

35. Assessing Caregiving Burden in Family Caregivers of Depression and Schizophrenia in Pakistan

12-07-2024 - National Library of Medicine

CONCLUSION: Family caregivers of schizophrenia undergo the severe burden of care and distress, and they may be considered a high-risk group for the development of mental health problems. Comprehensive intervention programs may be developed to involve them and safeguard their mental health. (Neuropsychopharmacol Hung 2024 26(2): 86-93) Keywords: caregiving burden, family, caregivers, depression, ... [Read more...](#)

36. Application of the Trail Making Test in the in schizophrenia research

12-07-2024 - National Library of Medicine

Even the Kraepelinian concept of dementia praecox suggests a link between schizophrenia and various cognitive deficits. Although cognitive impairment is not a fundamental symptom of schizophrenia, it is considered to be one of the basic features of the disease. The deficit can affect a number of cognitive domains and is most often specific. One of the most pronounced cognitive symptoms of ... [Read more...](#)

37. Involvement of serotonergic receptors in depressive processes and their modulation by beta-arrestins: A review

12-07-2024 - National Library of Medicine

Over time, several studies have been conducted to demonstrate the functions of the neurotransmitter 5-hydroxytryptamine (5-HT), better known as serotonin. This neurotransmitter is associated with the modulation of various social and physiological behaviors, and its dysregulation has consequences at the behavioral level, leading to various neurophysiological disorders. [Read more...](#)

38. Research Progress on the Association between Schizophrenia and Toxoplasma gondii Infection

11-07-2024 - National Library of Medicine

Toxoplasma gondii(T. gondii or Tg), is an obligatory intracellular parasite with humans as its intermediate hosts. In recent years, significant correlations between T. gondii infection and schizophrenia have been reported, including the possible mediating mechanisms. Currently, mechanisms and hypotheses focus on central neurotransmitters, immunity, neuroinflammation, and epigenetics however, ... [Read more...](#)

39. Auditory and Visual Hallucinations in a Congenitally Deaf Patient with Schizophrenia: A Case Report and Brief Literature Review

11-07-2024 - National Library of Medicine

This report discusses the case of a 54-year-old woman with a complex psychiatric history including schizophrenia, tardive dyskinesia, borderline intellectual function, and congenital deafness that reported auditory and visual hallucinations during an acute exacerbation of

schizophrenia. After resuming a previous lithium regimen and introducing olanzapine, the patient improved and was ... [Read more...](#)

40. Evaluation of systemic immune inflammation index and neutrophil-to-lymphocyte ratio in schizophrenia, bipolar disorder and depression

11-07-2024 - National Library of Medicine

CONCLUSION: The results of the study indicate that the significant difference in NLR and SII values persists after treatment in patients with schizophrenia and BD, and that the abnormal inflammatory response continues during the treatment process (Tab. 2, Ref. 41). [Read more...](#)

41. Schizophrenia-Like Deficits and Impaired Glutamate/Gamma-aminobutyric acid Homeostasis in Zfp804a Conditional Knockout Mice

11-07-2024 - National Library of Medicine

CONCLUSIONS: Zfp804a cKO mice reproducing SCZ-like pathological and behavioral phenotypes were successfully developed. A novel mechanism was determined in which Zfp804a caused Glu/GABA imbalance and reduced GAD67 expression, which was partly recovered by clozapine treatment. These findings underscore the role of altered gene expression in understanding the pathogenesis of SCZ and provide a ... [Read more...](#)

42. The role of microglia in early neurodevelopment and the effects of maternal immune activation

11-07-2024 - National Library of Medicine

Activation of the maternal immune system during gestation has been associated with an increased risk for neurodevelopmental disorders in the offspring, particularly schizophrenia and autism spectrum disorder. Microglia, the tissue-resident macrophages of the central nervous system, are implicated as potential mediators of this increased risk. Early in development, ... [Read more...](#)

43. Evaluating Reduced Blood Monitoring Frequency and the Detection of Hematological Abnormalities in Clozapine-Treated Patients With Schizophrenia: A Chart Review Study From the COVID-19 Pandemic

10-07-2024 - National Library of Medicine

CONCLUSIONS: Reducing blood monitoring frequency in patients on clozapine for more than 12 months did not compromise detection of hematological abnormalities. [Read more...](#)

44. Associations of Cognitive Expectancies With Auditory Hallucinations and Hallucinatory-Like Experiences in Patients With Schizophrenia

10-07-2024 - National Library of Medicine

CONCLUSIONS: The current study demonstrates that strong priors in the form of cognitive expectancies affect perception and play a role in perceptual disturbances. There is also a tentative possibility that overreliance on strong priors may be associated with hallucinations in currently hallucinating subjects. Possible, avoidable confounding factors are discussed in detail. [Read more...](#)

52. Importance of Early Diagnosis and Treatment of Perioperative Catatonia: A Case Report

07-07-2024 - National Library of Medicine

Symptoms of catatonia include silence, motionlessness, and postural retention. Although it is important to detect and treat catatonia early, before it becomes severe, postoperative cases have inherent risks that hinder diagnosis and treatment. A 60-year-old man with schizophrenia underwent endoscopic/thoracoscopic esophagectomy and was extubated in the operating room. [Read more...](#)

53. Media Use and Its Associations With Paranoia in Schizophrenia and Bipolar Disorder: Ecological Momentary Assessment

05-07-2024 - National Library of Medicine

CONCLUSIONS: This study shows that social media use was associated with a modest decrease in paranoia, perhaps reflecting the clinical benefits of social connection. However, structural disadvantage and individual factors may hamper the accessibility of media activities, and the mental health correlates of media use may further vary as a function of contents and contexts of use. [Read more...](#)

54. Study of the genetic association between selected 3q29 region genes and schizophrenia and autism spectrum disorder in the Japanese population

04-07-2024 - National Library of Medicine

Psychiatric disorders are highly inheritable, and most psychiatric disorders exhibit genetic overlap. Recent studies associated the 3q29 recurrent deletion with schizophrenia (SCZ) and autism spectrum disorder (ASD). In this study, we investigated the association of genes in the 3q29 region with SCZ and ASD. TM4SF19 and PAK2 were chosen as candidate genes for this study based on evidence from ... 66. Heavy metal concentrations and clinical symptoms in patients diagnosed with schizophrenia related to cigarette smoking

02-07-2024 - National Library of Medicine

In our study, blood concentrations of lead (Pb), arsenic (As), and cadmium (Cd) and urine concentrations of thallium (Tl) were measured together with related symptoms of heavy metal poisoning in cigarette smoking volunteers diagnosed with schizophrenia, in cigarette smokers not diagnosed with schizophrenia, and in the control group of non-smokers and not diagnosed with schizophrenia volunteers. [Read more...](#)

67. Neuroretinal Alterations in Schizophrenia and Bipolar Disorder: An Updated Meta-analysis

02-07-2024 - National Library of Medicine

Schizophrenia (SZ) and bipolar disorder (BD) are characterized by major symptomatic, cognitive, and neuroanatomical changes. Recent studies have used optical coherence tomography (OCT) to investigate retinal changes in SZ and BD, but their unique and shared changes require further evaluation. Articles were identified using PubMed and Google Scholar. 39 studies met the inclusion criteria. [Read more...](#)

68. The impact of care-recipient relationship type on mental health burden of caregivers for schizophrenia patients: evidence from Beijing, China

01-07-2024 - National Library of Medicine

CONCLUSION: This study reveals that caregivers having different types of care-recipient relationship with schizophrenia patients experience significantly different mental health burdens in Beijing, China, and major influencing factors are distinct according to different care-recipient relationship types. [Read more...](#)

69. Whole-exome sequencing of individuals from an isolated population under extreme conditions implicates rare risk variants of schizophrenia

01-07-2024 - National Library of Medicine

Schizophrenia (SCZ), which affects approximately 1% of the world's population, is a global public health concern. It is generally considered that the interplay between genes and the environment is important in the onset and/or development of SCZ. Although several whole-exome sequencing studies have revealed rare risk variants of SCZ, no rare coding variants have been strongly replicated. [Read more...](#)

70. Clinical, cognitive, and functional characteristics of recent-onset psychosis with autistic features: A 2-year longitudinal study

30-06-2024 - National Library of Medicine

Though categorized as separate illnesses, schizophrenia and autism are known to exhibit shared characteristics. This study explored the distinctions in clinical, cognitive, and functional characteristics among individuals with recent-onset psychosis, considering the severity of their autistic symptoms, involving longitudinal examinations. We analyzed 671 patients with recent-onset psychosis ... [Read more...](#)

71. Neuropeptide FF (NPFF)-positive nerve cells of the human cerebral cortex and white matter in controls, selected neurodegenerative diseases, and schizophrenia

29-06-2024 - National Library of Medicine

We quantified and determined for the first time the distribution pattern of the neuropeptide NPFF in the human cerebral cortex and subjacent white matter. To do so, we studied n = 9 cases without neurological disorders and n = 22 cases with neurodegenerative diseases, including sporadic amyotrophic lateral sclerosis (ALS, n = 8), Alzheimer's disease (AD, n = 8), Pick's disease (PiD, n = 3), ... 5. Serum Erythropoietin and Ischemic-Modified Albumin Levels in Adolescents with Obsessive-Compulsive Disorder

12-07-2024 - National Library of Medicine

Erythropoietin (EPO) has neuroprotective effects by increasing oxidative stress resistance and stabilizing redox balance. Ischemic-modified albumin (IMA) is a product of protein oxidation, and recent evidence suggests that IMA can be used as an indicator of oxidative damage. This study aimed to investigate serum EPO and IMA levels in obsessive-compulsive disorder (OCD) patients and to ... [Read more...](#)

6. Investigating an Acceptance and Commitment Therapy-Based Exposure Therapy Intervention in Treatment-Refractory OCD and Related Disorders: Changes in Psychological Flexibility, Treatment Engagement, and Treatment Perceptions

11-07-2024 - National Library of Medicine

While exposure therapy is the most effective psychological treatment for obsessive-compulsive disorder (OCD), anxiety, and traumatic stress-related disorders, it is not universally effective, indicating a need for further treatment optimization. This study investigated a shift in approach to exposure therapy with 29 treatment-refractory adults in an OCD clinic not responding to standard ... [Read more...](#)

7. Associations between borderline personality disorder symptoms and personality functioning in adolescents: A brief report

11-07-2024 - National Library of Medicine

Borderline personality disorder (BPD) is a serious mental disorder, which has been linked to a number of negative outcomes in adolescents and adults. BPD is generally linked to more severe impairments in personality functioning. The (differential) association of specific BPD symptoms

with severity level, however, has not been explored yet. The present study explores the relationship between ... [Read more...](#)

8. Scoping Review of Acceptance and Commitment Therapy for Obsessive-Compulsive Disorder in Iran

11-07-2024 - National Library of Medicine

Acceptance and commitment therapy (ACT) for obsessive-compulsive disorder (OCD) has been found efficacious in randomized clinical trials (RCTs), but the two widely known RCTs were conducted within the United States with predominantly White samples. Research that evaluates treatments like ACT for OCD outside the typical Western cultures is needed. The current scoping review summarizes the key ... [Read more...](#)

9. Associations between borderline personality disorder symptoms and personality functioning in adolescents: A brief report.

11-07-2024 - DOI Foundation (IDF)

Borderline personality disorder (BPD) is a serious mental disorder, which has been linked to a number of negative outcomes in adolescents and adults. BPD is generally linked to more severe impairments in personality functioning. The (differential) association of specific BPD symptoms with severity level, however, has not been explored yet. The present study explores the relationship between ... [Read more...](#)

10. Visual perspective taking neural processing in forensic cases with high density EEG

10-07-2024 - National Library of Medicine

This EEG study aims at dissecting the differences in the activation of neural generators between borderline personality disorder patients with court-ordered measures (BDL-COM) and healthy controls in visual perspective taking. We focused on the distinction between mentalizing (Avatar) and non-mentalizing (Arrow) stimuli as well as self versus other-perspective in the dot perspective task ... [Read more...](#)

11. Mental Health Hospitalizations in Canadian Children, Adolescents, and Young Adults Over the COVID-19 Pandemic

08-07-2024 - National Library of Medicine

CONCLUSIONS AND RELEVANCE: This cross-sectional study of Canadian youths and young adults found a rise in anxiety, personality disorders, and suicidality in females and a rise in eating disorders in both sexes in the COVID-19-prevalent period. These results suggest that in future pandemics, policymakers should support youths and young adults who are particularly vulnerable to deterioration in ... [Read more...](#)

13. A network perspective on posttraumatic stress disorder and comorbid borderline personality disorder symptoms

03-07-2024 - National Library of Medicine

Background: Comorbidity between posttraumatic stress disorder (PTSD) and borderline personality disorder (BPD) is surrounded by diagnostic controversy and although various effective treatments exist, dropout and nonresponse are high. Objective: By estimating the network structure of comorbid PTSD and BPD symptoms, the current study illustrates how the network perspective offers tools to tackle ... [Read more...](#)

14. Borderline Personality Disorder and Eating Disorders: Investigating the Role of Emotion Regulation

03-07-2024 - National Library of Medicine

Objective: Borderline personality disorder (BPD) and eating disorders (EDs) both cause significant distress and co-occur at rates higher than expected, signifying potential overlapping regulatory mechanisms between both disorders. More specifically, both disorders involve emotion regulation deficits, suggesting they may share specific maladaptive regulatory components. [Read more...](#)

15. Can Patients With Narcissistic Personality Disorder Change? A Case Series

01-07-2024 - National Library of Medicine

The study was set out to establish the potential for psychotherapy to effect improvements in patients with narcissistic personality disorder (NPD). Eight patients with NPD who improved in treatment were identified. Consensus clinician/investigator diagnostic scores from before and after the psychotherapies were retroactively established on the Diagnostic Interview for Narcissism (DIN) and the ... 18. Rethinking Unacceptable Thoughts: Validation of an Expanded Version of the Dimensional Obsessive-Compulsive Scale

27-06-2024 - National Library of Medicine

The Dimensional Obsessive-Compulsive Scale (DOCS) is widely used to measure obsessive-compulsive disorder (OCD) severity across four broad symptom dimensions (i.e., contamination, responsibility for harm, unacceptable thoughts, symmetry). Despite its proven utility, there is reason to suspect that the unacceptable thoughts subscale conflates different types of unacceptable thoughts that are ... [Read more...](#)

19. A brief screener for impairment in personality functioning: Psychometric validation of the Five-Item Screening Scale for Personality Disorders in a Dutch-speaking clinical sample.

23-05-2024 - DOI Foundation (IDF)

Personality disorders (PDs) are characterized by problems with identity and self-direction. Since the recent dimensional PD models of the Diagnostic and Statistical Manual of Mental Disorders, fifth edition (DSM-5) and the International Statistical Classification of Diseases and Related Health Problems, 11th edition, the role of identity and self-direction in personality pathology has been ... [Read more...](#)

20. Borderline personality disorder stigma: Examining the effects of diagnostic disclosure, behavior, and gender as sources of stigma in the general population.

23-05-2024 - DOI Foundation (IDF)

Borderline personality disorder (BPD) is a severe mental disorder characterized by a pervasive pattern of emotional and behavioral dysregulation. Dysfunction and distress may be compounded by stigmatizing beliefs held by members of the community. There is a lack of research focusing on stigmatizing beliefs about BPD held by the general population. This study addressed this gap by examining ... [Read more...](#)

21. Comparing the symptom presentation similarities and differences of complex posttraumatic stress disorder and borderline personality disorder: A systematic review.

16-05-2024 - DOI Foundation (IDF)

Complex posttraumatic stress disorder (CPTSD) is characterized in the International Classification of Diseases-11 by affect dysregulation, negative self-concept, and relationship impairments, symptoms also presented in borderline personality disorder (BPD). Some research shows CPTSD as a distinct disorder, others as a subgroup or a replacement for BPD. No review currently amalgamates the ... [Read more...](#)

22. Borderline personality disorder and social connectedness: A systematic review.

02-05-2024 - DOI Foundation (IDF)

Borderline personality disorder (BPD) is a debilitating disorder characterized by deficits in social connectedness, which is a multifaceted construct with structural (i.e., the number, diversity, or frequency of social relationships), functional (i.e., the actual or perceived resources relationships provide), and quality (i.e., the positive and negative aspects of social relationships) ... 4. [Correspondence] Integrate evidence certainty in ranking interventions – Authors' reply

18-07-2024 - Elsevier

We thank Yiyong Wei and colleagues for their Correspondence about our iCOMP network meta-analysis.¹ We agree with the authors that rankings in network meta-analysis need to be interpreted with caution, and that they might be misleading when interpreted in isolation. Yet, we believe that when interpreted correctly, rankings complement measures of effect size and assessments of certainty of ... [Read more...](#)

5. Effect of juggling expertise on pointing performance in peripheral vision

12-07-2024 - Public Library of Science (PLoS)

by Tristan Jurkiewicz, Ludovic Delporte, Patrice Revol, Yves Rossetti, Laure Pisella Juggling is a very complex activity requiring motor, visual and coordination skills. Expert jugglers experience a “third eye” monitoring leftward and rightward ball zenith positions alternately, in the upper visual fields, while maintaining their gaze straight-ahead. This “third eye” reduces their motor noise ... [Read more...](#)

6. Association of psychological violence, harassment, and cyberbullying with depression and turnover intentions in female nurses

10-07-2024 - National Library of Medicine

PURPOSE: Psychological violence and harassment have been reported to be associated with mental health problems and turnover intention among nurses. Cyberbullying, a hidden form of harassment using information and communication technology, is attracting attention as a factor that threatens the mental health of nurses. This study aimed to add coping characteristics, social support, ... [Read more...](#)

7. Her village: experiences of drug-involved women in a female-only aftercare program in the Philippines

10-07-2024 - National Library of Medicine

PURPOSE: Women are exposed to vulnerabilities that can lead to drug use or hinder recovery. However, there is a dearth of studies on recovery programs for women. This study aims to add to the literature by examining the feasibility of a women-only aftercare program for recovering users in the Philippines. [Read more...](#)

8. We need a contract between the public and the NHS that focuses on prevention

04-07-2024 - British Medical Journal

Cunnett and Smith argue for a new public conversation about the NHS.¹ But we must go further than they suggest. We need a new “contract” between the public and patients and the NHS, and to review medical care in the last phases of life (fewer drugs and more care). We also need to be realistic about what a publicly funded service can offer—slightly restricted but high quality responsive care, ... [Read more...](#)

9. The criteria used to rule out mild cognitive impairment impact dementia incidence rates in subjective cognitive decline

29-06-2024 - National Library of Medicine

CONCLUSIONS: This study highlights that the approach used to ascertain SCD has important implications for both SCD phenotypes and prognosis. This underscores the importance of how MCI is operationalized within SCD studies. More broadly, the findings add to a growing body of work indicating that objective cognition should not be overlooked in SCD, and offer a potential explanation for the ... [Read more...](#)

13. Suicide, suicide attempts and self-harm in Moroccan prisons

10-07-2024 - National Library of Medicine

PURPOSE: High rates of suicide and self-harm are reported in prisons in Western countries, while fewer studies exist from a non-Western context. This study aims to identify rates of suicide, non-fatal suicide attempts and self-harm in Moroccan prisons and to better understand the context, methods, tools, predictors and profile of persons engaged in the acts. [Read more...](#)

14. Promoting Adolescent Suicide Prevention Programmes in Pakistan: An Insight into Challenges and Opportunities

09-07-2024 - National Library of Medicine

Suicide is a global health concern, with profound social, emotional, and economic repercussions for individuals, families, and communities. Suicidal behaviour among adolescents, encompassing ideation, self-harm, and suicide attempts poses a significant global public health challenge. The cultural, social, and economic factors that contribute to suicide in Pakistan are complex and multifaceted, ... [Read more...](#)

20. Constructing prediction models and analyzing factors in suicidal ideation using machine learning, focusing on the older population

22-07-2024 - National Library of Medicine

Suicide among the older population is a significant public health concern in South Korea. As the older individuals have long considered suicide before committing suicide trials, it is important to analyze the suicidal ideation that precedes the suicide attempt for intervention. In this study, six machine learning algorithms were employed to construct a predictive model for suicidal thinking ... [Read more...](#)

21. Social prescribing for suicide prevention: a rapid review

22-07-2024 - National Library of Medicine

This rapid review delves into the realm of social prescribing as a novel approach to suicide prevention by addressing the social determinants of health. Through an exploration of various databases including MEDLINE, PsychInfo, WILEY, and Sage, a total of 3,063 articles were initially identified as potentially relevant to the research. Following a meticulous screening process, ... [Read more...](#)

22. Masculinity and Afrocentric Worldview: Assessing Risk and Protective Factors of Self-Reliance and Ubuntu on Young Black Men's Suicide Ideation

22-07-2024 - National Library of Medicine

CONCLUSION: These findings suggest that compassion, an important aspect of Ubuntu, may have a protective effect against suicidal ideation, whereas high levels of depression and self-reliance may be linked to a greater vulnerability to suicidal ideation. As such, the current study recommends that interventions should reduce suicidal ideation and increase mental well-being among YBMs. [Read more...](#)

23. Prediction of the mechanism of suicide among Minnesota residents using data from the Minnesota violent death reporting system (MNVDRS)

22-07-2024 - National Library of Medicine

CONCLUSIONS: The study demonstrated that the use of a firearm in a death by suicide, as opposed to any other means of suicide, can be reasonably well predicted when an individual's social determinants and personal history are considered. These predictive models could help inform many prevention strategies, such as safe storage practices, background checks for firearm purchases or red flag laws. [Read more...](#)

24. Development of an Optimized Promoter System for Exosomal and Naked AAV Vector-Based Suicide Gene Therapy in Hepatocellular Carcinoma

22-07-2024 - National Library of Medicine

Suicide gene therapy is a promising strategy for the potential treatment of hepatocellular carcinoma (HCC). However, the lack of high transduction efficiency and targeted vectors in delivering the suicide genes to only the HCC cells is a major impediment. In the present study, we utilized an adeno-associated virus serotype 6 (AAV6) and its exosomal counterpart (exo-AAV) comprising of an ... [Read more...](#)

25. Connected for life: How social connectedness can help prevent suicide in American Indian and Alaska Native communities

21-07-2024 - National Library of Medicine

Enhancing social support and connectedness can reduce suicide risk, yet few studies have examined this effect in American Indian and Alaska Native (AI/AN) adults. We assessed suicidal ideation and behavior, thwarted belongingness, social support, enculturation, historical trauma, and traumatic life events in 709 AI/AN adults at high risk of suicide from five AI/AN communities. [Read more...](#)

26. Adapting the Zero Suicide framework to the adult emergency department setting: Strategies for nurse leaders

21-07-2024 - National Library of Medicine

The ED has been increasingly recognized as a key setting for suicide prevention. Zero Suicide (ZS) is an aspirational goal to eliminate suicide for all patients within a health care system through utilization of best practices. However, there has been limited exploration of ZS implementation within the ED. As ED nurses play an important role in suicide prevention through their close contact ... [Read more...](#)
